Throughout the book, economist Andrew Caplin provides new approaches to help scholars collaborate and solve problems that can shape economic outcomes and bridge the gap between theoretical knowledge and the real world. Divided into two parts, the first section brings readers up to speed on economic concepts that underlie decision-making mistakes, such as utility functions, subjective beliefs, and costs of learning. It also explores real-world applications, including improvements in legal decision-making, online privacy protection, and optimizing human-AI collaboration. The book also discusses the future impact of AI on the workforce and emphasizes the need for decision-making skills and financial literacy in navigating this evolving landscape. In the second section of the book, Caplin addresses the barriers to progress within social sciences, advocating for interdisciplinary cooperation and innovative measurement techniques to advance the field. The book invites readers to contribute to the development of cognitive economics. Whether you are a socially conscious and hard-working citizen, business leader, scholar, or policymaker, this book will help you understand why cognitive economics matters to you and how you can contribute to its takeoff. This book is available open access, which means it is freely available online. *Industrial and Labour Economics*, **Voter Behavior in Economics Perspective** Arthur J.H.C. Schram, 2012-12-06 In this book, voter behavior is analyzed from an economist's point of view. The influence of an economy on voter behavior is investigated, and this behavior is analyzed in the perspective commonly used by economists. Economic tools are applied in the analyses. The book contains empirical analyses linking demographic variables to voter turnout and party choice using cross-section data for the Netherlands. Attention is focused on whether turnout and party choice decisions are taken sequentially or simultaneously by voters. An empirical test supports the former. Using these results, behavioral models of party choice and voter turnout are developed. Existing econometric analyses of voting behavior are put on a more solid theoretical footing. In both models, a group perspective is used, in line with increased attention for this perspective in economics and political science. Empirical

applications of the party choice model allow for an estimation of relative preferences for public goods using the revealed preference mechanism provided by voting intention An alternative method for detecting these preferences a new survey design is discussed as well In the turnout model attention is focused on the role of civic duty in a group context
