Energy Security Adrian V. Gheorghe, Liviu Muresan, 2011-02-09 In terms of energy security the Black Sea region is important to Europe Inevitably and for very good reasons a lot of attention has been given to the existing and planned pipeline routes going around or across the Black Sea Much less attention has been given to the development of the Black Sea energy market in its own right and to the potential advantages of coping with some current and future energy issues in a multilateral regional format rather than through individual action at national level The present book addresses in a comprehensive manner the current problematic of energy security and goes beyond pipeline politics without playing down their continued significance it addresses some topical questions related to the sustainability and resilience of energy systems as applicable to the Black Sea region

The Political Economy of National and Energy Security Pantelis Sklias, Floros Flouros, 2019-01-17 The aim of this collective volume is to study the crucial aspects related to the interconnection between the political economy of energy security and national security which is of great importance globally due to great volatility and complexity Several conceptual frameworks regarding the issue of energy security are examined in order to understand the relationships between relevant parameters and then to investigate their implications for national security Research needs to examine how energy security affects national security of nation states around the world either as producers or consumers of energy resources In this volume the theory of realism is employed for the analysis of such concepts as it emphasizes the primary importance of any given state and its national security whereas realism is essentially a political ideology and looks to provide the proper spectrum for further analysis The fact that the political economy of energy security and the political economy of national security are addressed as separate parts in the literature are among the main drawbacks in our effort to comprehend the issues concerned The abovementioned results to a dichotomy that affects the ontological and epistemological essence of the two pillars of the issue in question based on our working hypothesis should be addressed in a

complementary and interconnected way Addressing both theoretical concepts and case studies to validate the argument the authors believe that the academic level of the proposed subject is related to graduate and postgraduate studies **The**

Energy Security Dilemma David Bernell, Christopher A. Simon, 2016-04-14 This book analyzes the energy security of the United States its ability to obtain reliable affordable and sufficient supplies of energy while meeting the goals of achieving environmental sustainability and protecting national security The economic and national security of the United States is largely dependent upon fossil fuels especially oil Without significant changes to current practices and patterns of energy production and use the domestic and global impacts security economic and environmental are expected to become worse over the coming decades Growing US and global energy demands need to be met and the anticipated impacts of climate change must be avoided all at an affordable price while avoiding conflict with other nations that have similar goals Bernell and Simon examine the current and prospective landscape of American energy policy from tax incentives and mandates at the federal and state level to promote wind and solar power to support for fracking in the oil and natural gas industries to foreign policies designed to ensure that markets and cooperative agreements not armies navies and rival governments control the supply and price of energy resources They look at the variety of energy related challenges facing the United States and argue that public policies designed to enhance energy security have at the same time produced greater insecurity in terms of fostering rising and potentially unmet energy needs national security threats economic vulnerability and environmental dangers Rethinking Energy Security in Asia: A Non-Traditional View of Human Security Mely

Caballero-Anthony, Youngho Chang, Nur Azha Putra, 2012-06-07 Traditional notions of security are premised on the primacy of state security In relation to energy security traditional policy thinking has focused on ensuring supply without much emphasis on socioeconomic and environmental impacts Non traditional security NTS scholars argue that threats to human security have become increasingly prominent since the end of the Cold War and that it is thus critical to adopt a holistic and multidisciplinary approach in addressing rising energy needs This volume represents the perspectives of scholars from across Asia looking at diverse aspects of energy security through a non traditional security lens The issues covered include environmental and socioeconomic impacts the role of the market the role of civil society energy sustainability and policy trends in the ASEAN region **The Political Economy of Renewable Energy and Energy Security** E. abstract Since both food security and energy security are countries strategic objective this study typically advocates a deep understanding of the concept of political stability to incorporate food and energy security as a new pillar of conflict management based on an empirical understanding of the nexus and its effect We used food deficit as proxy for food security and energy imports for energy security from the World Bank database Suffering mutilation and death of human beings are the most obvious and important effects of all conflicts as well as natural disasters Yet material losses are also important because they reduce the livelihood and recovery capacities of conflict survivors Moreover in many cases the indirect effects of conflict cause more deaths than direct violence It has been found that generally the indirect costs of war are greater than its direct costs and persist long after the end of the conflict Instability and conflict affect many economic sectors such as reducing foreign exchange earnings which can have serious consequences for development and food security Indeed global population growth combined with the effects of climate change on agriculture pose the risk of a Malthusian trap to humanity that can only be avoided by a more efficient and sustainable production system Energy security policies and climate policies are often considered as two sides of the same coin their objectives being at least complementary if not identical **Energy Security Challenges for the 21st Century** Gal Luft, Anne Korin, 2009-08-10 The impact of energy on global security and economy is clear and profound and this is why in recent years energy security has become a source of concern to most countries However energy security means different things to different countries based on their geographic location their endowment of resources their strategic and economic conditions In this book Gal Luft and Anne Korin with the help of twenty leading experts provide an overview of the world's energy system and its vulnerabilities that underlay growing concern over energy security It hosts a debate about the feasibility of resource conflicts and covers issues such as the threat of terrorism to the global energy system maritime security the role of multinationals and non state actors in energy security the pathways to energy security through diversification of sources and the development of alternative energy sources It delves into the various approaches selected producers consumers and transit states have toward energy security and examines the domestic and foreign policy tradeoffs required to ensure safe and affordable energy supply The explains the various pathways to energy security and the tradeoffs among them and demonstrates how all these factors can be integrated in a larger foreign and domestic policy framework It also explores the future of nuclear power the complex relations between energy security and environmental concerns and the role for decentralized energy as a way to enhance energy security
