and communication technologies have substantially affected most segments of our life leading to the Information Age or Information Revolution. On both individual and state scale, information has become a vital commodity by which one measures levels of knowledge, skills, well-being, prosperity and development. This academic work traces the evolution of the Information Age and the emerging trends of diplomacy and politics in today's world. It signals potential opportunities and threats while strategically forecasting current and future implications. Including three major chapters, the work is divided into eleven significant themes. It reviews the emergence of knowledge-based societies and highlights their main features. The course of globalization, the worldwide Internet development, the consequences of restricting the flow of information and the Revolution in Military Affairs are among the issues examined. Also thoroughly treated is the evolution of diplomacy with reference to information and intelligence gathering, analysis and policy making. The publication outlines the qualifications of diplomats and executives required at the present and coming stages of professionalism. In addition to examining contemporary traditional and non-traditional conflicts around the globe, it takes a look at U.S. hegemony policies in world affairs. Certain cultural and social issues directly linked to the Information Age are dealt with as well. They refer to the growing importance of culture and identity awareness in an era of increasing social interdependence and to the global evolution of languages and their use in everyday life and in current affairs. The book concludes with a set of observations in the aftermath of the September 11 attacks on the United States. The observations point to particular notions and developments that influence our way of living, politics and diplomacy. Furthermore, specific analysis is made to the U.S. invasion in Iraq in March 2003 and to its consequences.

The Internet in China Zixue Tai, 2007-05-07. The Internet in China examines the cultural and political ramifications of the Internet for Chinese society. The rapid growth of the Internet has been enthusiastically embraced by the Chinese government, but the government has also rushed to seize control of the virtual environment. Individuals have responded with impassioned campaigns against official control of information. The emergence of a civil society via cyberspace has had profound effects upon China. For example, in 2003, based on an Internet campaign, the Chinese Supreme People's Court overturned the ruling of a local court for the first time since the Communist Party came to power in 1949. The important question this book asks is not whether the Internet will democratize China, but rather in what ways the Internet is democratizing communication in China. How is the Internet empowering individuals by fostering new types of social spaces and redefining existing social relations?
