Ecosystems Nature Economics Science And Policy:

Ecosystems and Nature R. Kerry Turner, Kenneth Button, Peter Nijkamp, 1999 *Ecosystems and Nature* brings together the work of leading authorities in biodiversity research. It provides readers with a broad interdisciplinary perspective on the major issues in biodiversity including economics, natural science, management and ethics. The collection is divided into four main sections. Part I introduces some fundamental scientific and socio-economic concepts and analysis in order to illustrate the complexities involved in the human ecosystems interface. Part II deals with the valuation of ecosystems with special emphasis on the main biomes: forests, wetlands, marine systems, grasslands and agriculture. Part III covers the problem of value appropriation and the relevant constraints and available policy instruments. The final section focuses on the difficult ethical issues that surround utilization and conservation of biodiversity.

Greening the Economy Robert Williams, 2010-09-13

Drawing on both economics and ecology, this book offers telling insights into the confusing jobs versus environment debates as well as charts a recommended path towards a more co-habitable relationship. Avoiding the extreme views that economic growth will either destroy or save our natural environment, this book takes a more discriminating stance and illuminates why our nation's natural environment is both better and worse than forty years ago.

Spatial Ecological-Economic Analysis for Wetland Management Jeroen C. J. M. Bergh, Aat Barendregt, Alison J. Gilbert, 2004-06-10 Wetlands are very sensitive and valuable ecosystems that are subject to much stress from human activities. The study presented here has developed an innovative triple layer framework for analysis of wetland management. This approach provides support for spatial matching between physical planning, hydrological and ecological processes and economic activities. The authors describe how integrated modelling at the regional scale can be achieved in practice. Following an introduction to wetlands, theoretical aspects of the contributing disciplines are discussed as well as various aspects of integrated and spatial modelling. An applied integrated assessment of spatial wetland management for the Vecht area between Amsterdam and Utrecht is then presented. This assessment has resulted in a set of linked hydrological, ecological and economic models formulated at the level of grids and polders and various types of evaluations and rankings of scenarios. The results indicate the value of maintaining spatial detail for as long as possible.

Beyond Benefit Cost Analysis Domenico Patassini, Donald Miller, 2017-11-30 Illustrated by case studies from Europe, North America and the Middle East, this book examines how non-market values can be identified, measured and incorporated into planning evaluation methodologies. The traditional means of assessing planning options, benefit cost analysis, requires that all effects be expressed in monetary terms and this volume offers alternative approaches. It presents strategies for accomplishing the major purposes of planning evaluation, including the provision of an explicit, replicable basis for public assessment in alternative ways. Growing demand for public involvement and for accountability in decision making requires better means for accommodating a broad range of concerns in planning evaluation. Methodologies examined include effectiveness cost and multicriteria analysis and the book explores how these have been applied in practice.

in developing special issue plans complex regional development strategies and efforts to analyze the environmental justice implications of major infrastructure projects Use of scenarios and problem structuring methods by stakeholder groups are also explored

Ecosystems Richard J. Hobbs,Eric S. Higgs,Carol Hall,2013-01-07 Land conversion climate change and species invasions are contributing to the widespread emergence of novel ecosystems which demand a shift in how we think about traditional

approaches to conservation restoration and environmental management They are novel because they exist without historical precedents and are self sustaining Traditional approaches emphasizing native species and historical continuity are challenged by novel ecosystems that deliver critical ecosystem services or are simply immune to practical restorative efforts Some fear that by raising the issue of novel ecosystems we are simply paving the way for a more laissez faire attitude to conservation and restoration Regardless of the range of views and perceptions about novel ecosystems their existence is becoming ever more obvious and prevalent in today's rapidly changing world In this first comprehensive volume to look at the ecological social cultural ethical and policy dimensions of novel ecosystems the authors argue these altered systems are overdue for careful analysis and that we need to figure out how to intervene in them responsibly This book brings together researchers from a range of disciplines together with practitioners and policy makers to explore the questions surrounding novel ecosystems It includes chapters on key concepts and methodologies for deciding when and how to intervene in systems as well as a rich collection of case studies and perspective pieces It will be a valuable resource for researchers managers and policy makers interested in the question of how humanity manages and restores ecosystems in a rapidly changing world A companion website with additional resources is available at www.wiley.com/go/hobbs_ecosystems *Biological Diversity* L. N. Petrov, 2003 One of the cornerstones of life's wonders is the vast array of species filling the planet From plants to animals to humans there is no shortage of beings to provide spice of life variety is said to be Periodically scientists announce the discovery of a new form of life so it seems as if Earth is capable of producing new species just to keep us on our toes At times the immense breadth of living things can even feel overwhelming as one pauses to ponder how numerically insignificant humans are when compared to the insect population Given the biological diversity of the planet it is incumbent upon humans to safeguard the natural beauty of the environment To that end conservation takes on special importance necessitating the balancing of industrial expansion with preserving the flora and fauna surrounding us This book is an important tool in understanding and researching the many different life forms spanning the globe Collected here is a substantial and carefully selected listing of relevant literature on biological diversity and its conservation Following this bibliography are author title and subject indexes to allow for further access to this information The sheer bulk of the works about biological diversity can be so intimidating that a book such as this one becomes useful in sorting through the resources about the importance of life's variety

Sustainable Apple Breeding and Cultivation in Germany Hendrik Wolter, 2023-03-20 Applying a socio ecological framework this book explores how the innovative approach of commons based organic apple breeding can contribute to sustainability in agricultural and food systems more widely As fruit breeding and cultivation systems are confronted with a range of sustainability challenges there are calls for new and innovative breeding approaches beyond mainstream economic solutions that would mitigate these sustainability challenges Apples in particular are facing serious environmental challenges with the negative environmental impacts of modern conventional breeding and farming loss of agrobiodiversity low participation and diminishing diversity of market actors in the wake of privatization and economization trends result in a lack of resilience in current breeding and cultivation systems Drawing on in depth case study research on apple production in Germany this book advances the innovative solution of commons based apple breeding as a model for developing resilience in fruit breeding and cultivation It analyzes this

approach comparing it with more conventional practices and showcases which factors could inhibit the broad implementation of commons based apple breeding and how they can be overcome to exploit its full potential. Contributing to the great ambition of finding sustainable solutions across all agricultural sectors, this book opens up new and interdisciplinary perspectives on fruit breeding and cultivation, which is a largely neglected issue in contemporary discussions on agriculture and food production. This book will be of great interest for students and scholars from the fields of sustainable food systems, sustainable agriculture, crop science and resource management and in particular those that seek inspiration for innovative approaches rooted in sustainability research, social ecological resilience and the commons. *Handbook on the Economics of Ecosystem Services and Biodiversity* Paulo A L D Nunes, Pushpam Kumar, Tom Dedeurwaerdere, 2014-06-27. Water ecosystem services Martin-Ortega, Julia, Ferrier, Robert C., Gordon, Iain J., Khan, Shahbaz, Cambridge, UK, Cambridge University Press, 2015-04-30. This comprehensive volume describes how ecosystem services based approaches can assist in addressing major global and regional water challenges such as climate change, biodiversity loss and water security in the developing world by integrating scientific knowledge from different disciplines such as hydrological modelling, environmental economics, psychology and international law. Empirical assessments at the national catchment and regional levels are used to critically appraise this systemic approach and the merits and potential limitations are presented. The practicalities of this approach with regard to water resources management, nature conservation and sustainable business practices are discussed and the role of society in underpinning the concept of ecosystem services is explored. Presenting new insights and perspectives on how to shape future strategies, this contributory volume is a valuable reference for researchers, academics, students and policy makers in environmental studies, hydrology, water resource management, ecology, environmental law, policy and economics and conservation biology.
