Economic And Institutional Analyses Of Soil Conservation Projects In Central America And The Caribbean:

Economic and Institutional Analyses of Soil Conservation Projects in Central America and the Caribbean Ernst Lutz, Stefano Pagiola, Banco Mundial, 1994 *Economic and Institutional Analyses of Soil Conservation Projects in Central America and the Caribbean* Ernst Lutz, Stefano Pagiola, Carlos Reiche C., World Bank, 1994 The results of the case studies show that conservation is profitable in some cases but not in others

Agriculture and the Environment Ernst Lutz, 1998-01-01 Agriculture in developing countries has been remarkably productive during the last few decades however the production levels were achieved at the cost of placing more stress on natural resources and the environment This volume brings together state of the art applied practical research related to agriculture development and the environment in the developing world It attempts to distill current knowledge and to summarize it in readable form for development practitioners Where possible authors use specific examples to indicate which approaches have worked and which have not under which conditions and why

El Salvador, Rural Development Study, 1998 Although El Salvador has recorded impressive overall economic growth in the 1990s during this period agricultural growth has lagged considerably below the rest of the economy which raises concerns about the long run capacity of the sector to raise incomes and employment in rural areas and contribute to overall growth The main objectives of this sector review are twofold to develop a strategy to revitalize the agricultural sector and realize its full potential for efficient and sustainable growth by enhancing competitiveness and to present the main findings of the analysis of rural poverty and develop its implications for the design of a strategy for poverty alleviation

New Topics in International Agricultural Trade and Development Dragan Miljkovic, 2006 Agricultural trade and development is a backbone of international trade It includes agricultural trade patterns commercial policy international institutions such as WTO Tariff and non tariff barriers in international trade exchange rates biotechnology and trade agricultural labour mobility land reform environment and the areas and issues spanning these areas This book brings together leading research and issues in this fundamental field

Resource Management in the Ecuadorian Andes: An Evaluation of CARE's PROMUSTA Program, 2019 In recent years development organizations have spent substantial resources on programs to reduce the problems associated with soil erosion Many programs have focused on the use of incentives to induce conservation and have maintained a top down approach to conservation Quite often this is ineffective and farmers abandon conservation measures once incentives are withdrawn In Ecuador CARE International has offered an alternative approach that embeds conservation in the agricultural system By offering agricultural diversification and intensification with a complementary program that enhances short term benefits of conservation CARE induces farmers to maintain sustainable practices Using data from a sample of participant and non participant Ecuadorian households we show the success of the CARE approach Participants in the CARE program are found to have high rates of adoption of conservation practices and to simultaneously change their agricultural system Results indicate that with a strong extension service and a

menu of adaptable technologies conservation is enhanced when presented with complementary changes in agriculture

Economic Development and Environmental Policy Scott Barrett,1996-01-01 **Natural Resource Management in the Hillsides of Honduras** Bruno Barbier,Gilles Bergeron,2001-01-01 Farmers who live in fragile tropical hillsides often operate under severe resource constraints and face difficult tradeoffs when confronted with changes in production conditions Using a bioeconomic linear programming model this study simulates the effects of population market and technological changes on farmers income and on their management of the natural resource in a hillside area of Central Honduras The results show that economic growth and agricultural intensification are not necessarily adverse for fragile environments In fact farmer incomes would be much lower and degradation much higher if intensive agriculture had not been adopted Such a result however must be framed within a complex set of conditioning factors among which agroecology plays a fundamental role Although the economic advantages of horticultural production are clear in the area studied this strategy is not suited for all contexts This report offers a series of policy recommendations that implicitly recognize such limitations thereby helping to direct resources where they will have their greatest impact **Encyclopedia of Soil Science** Rattan Lal,2017-01-11 New and Improved Global Edition Three Volume Set A ready reference addressing a multitude of soil and soil management concerns the highly anticipated and widely expanded third edition of Encyclopedia of Soil Science now spans three volumes and covers ground on a global scale A definitive guide designed for both coursework and self study this latest version describes every branch of soil science and delves into trans disciplinary issues that focus on inter connectivity or the nexus approach For Soil Scientists Crop Scientists Plant Scientists and More A host of contributors from around the world weigh in on underlying themes relevant to natural and agricultural ecosystems Factoring in a rapidly changing climate and a vastly growing population they sound off on topics that include soil degradation climate change soil carbon sequestration food and nutritional security hidden hunger water quality non point source pollution micronutrients and elemental transformations New in the Third Edition Contains over 600 entries Offers global geographical and thematic coverage Entries peer reviewed by subject experts Addresses current issues of global significance Encyclopedia of Soil Science Third Edition Three Volume Set expertly explains the science of soil and describes the material in terms that are easily accessible to researchers students academicians policy makers and laymen alike Also Available Online This Taylor E mail e reference taylorandfrancis.com International Tel 44 0 20 7017 6062 E mail online sales tandf.co.uk Agrarian Policies in Central America W. Pelupessy,R. Ruben,1999-12-13 Macroeconomic adjustment and sectoral reforms have strongly modified the framework for rural development in Central America This book offers a structural analysis of agrarian policies in Central America and their impact on production conditions and farmers welfare *Agroecological Innovations* Norman Thomas Uphoff,2013 The world's food supply needs to rise significantly yet both arable and water supplies per capita are decreasing Not only are modern agricultural methods beyond the reach of those suffering the greatest food insecurity but they are also ecologically damaging

relying upon fossil energy and chemical inputs This volume offers a collection of innovative and diverse approaches to agricultural development Documented in 12 case studies these approaches are reliant upon greater knowledge skill and labour input rather than larger capital expenditure They are shown to increase yield substantially sometimes doubling or tripling output This volume presents the concepts and operational means for reorienting agricultural efforts towards these more environmentally friendly and socially desirable approaches in the developed as well as developing world

Alternative Irrigation Christopher J Barrow,2014-02-04 An introduction to runoff agriculture a form of agricultural irrigation this text describes how the use of surface and subsurface water often overlooked and wasted enables both small farmers and commercial agriculturists to improve yields and the security of harvest even in harsh and remote environments The text introduces the techniques and strategies as well as the challenges and the potential of the crucial approach which can contribute so much to reducing land degradation and improving conservation and sustainability **Trees, Crops, and**

Soil Fertility G. Schroth,Fergus L. Sinclair,2003-02-19 Annotation Successful agroforestry requires an understanding of the complex relationship between trees crops and soils This book provides a review of both economic and biophysical aspects of soil use and research in agroforestry with an emphasis on nutrient poor forest and savanna soils Key topics covered include the economics of soil fertility management cycling of water nutrients and organic matter soil structure and soil biological processes The book combines synthetic overviews of research results and a review of methods used in research From the foreword 2The book is written within a particular context soil fertility development under agroforestry At first this may seem very specific and thus limited in appeal and application But over the last decade or so agroforestry research has been one of the most influential in developing new insights into soil biology and fertility and thus provides a very suitable framework for review of progress Furthermore the influence of trees on soil is profound and of significance beyond agroforestry systems so the book is likely to be of interest in the wider spheres of agriculture forestry and ecological sciences 3 Mike Swift TSBF Nairobi Kenya *Theory, Measurement, and Policy* V. Pandit,2008 Presidential addresses delivered at the annual conferences of TIES **Tradeoffs Or Synergies?** David R. Lee,Christopher B. Barrett,2000-11-22 The need to increase food production enhance economic growth and reduce poverty in an environmentally sustainable context is an issue of growing importance This book addresses the linkages and tradeoffs involved in solving such key challenges Review and Planning Workshop of Systems Analysis and Impact Assessment Research , *Valuing Tropical Forests* Randall A. Kramer,Narendra P. Sharma,Mohan Munasinghe,1995-01-01 The loss of large areas of tropical forests has become a major concern of the world community Although there are many causes of tropical deforestation and forest degradation an important cause appears to be an undervaluation of forests by markets and governments One reason for this undervaluation is that many forest products such as food and medicinal products are traded in informal markets for which there are little data Another reason is that many services provided by forests such as carbon storage biodiversity protection recreation and watershed protection are not

traded in markets hence their economic values are often ignored Even where environmental values are recognized they may not be measured or used to promote efficient resource management This volume examines some causes of tropical deforestation and explores forest valuation issues in context of a protected area project The study sets out the context of tropical deforestation and loss of biodiversity and provides a framework for examining the economic value of forests It also presents a detailed case study of Madagascar that illustrates the practical application of the techniques of analysis to the valuation of forests Website *Land Resources* Anthony Young,2000-07-20 This book provides an authoritative review of the resources of soils water climate forests and pastures on which agriculture depends It assesses the interactions between land resources and wider aspects of development including population and poverty Unless action is taken the developing world will face recurrent problems of food security and conflict The book gives some forcefully expressed criticisms of current methods of assessing land degradation and placing an economic value on land It should be read by all involved in rural development including scientists economists geographers sociologists planners and students of development studies It provides a summary and perspective of the field of land resources and suggests improvements needed to conserve resources for future generations The hardback edition of the book received excellent reviews **Land Quality, Agricultural Productivity, and Food Security** Keith Daniel Wiebe,2003-01-01 Action is needed to fight poverty by sustaining the environment and the use of natural resources Land Quality Agricultural Productivity and Food Security explores a range of factors driving food security The book offers an assessment to link quality of the available land resources with productivity of land and the ability to ensure food security It offers a mixture of broad scale assessments across the globe with detailed case studies deepening our understanding of economics and decision making mechanisms It is recommended to researchers as well as actors in the private and public domain who are keen to improve their understanding of the appropriate actions that ensure food security in the decade to come Floor Brouwer Agricultural Economics Research Institute LEI The Hague The Netherlands Land quality and land degradation affect agricultural productivity and food security but quantifying these relationships has been difficult Data are extremely limited and outcomes are sensitive to the choices that farmers make The contributors to this book including soil scientists geographers and economists analyse data on soils climate land cover agricultural inputs and outputs and a variety of socio economic factors to provide new insights into three key issues the extent to which differences in land quality generate differences in agricultural productivity across countries how farmers responses to differences or changes in land quality are influenced by economic environmental and institutional factors and whether land degradation over time threatens productivity growth and food security at local regional and global levels The Economics of Conservation Agriculture ,2001-01-01 Conservation agriculture aims to make better use of agricultural resources through the integrated management of available soil water and biological resources combined with limited external inputs This study examines the financial and non financial factors that affect the adoption and success of

conservation agriculture at farm national and global levels
