**The Economics of Transformation** Alfred Schipke,Alan M. Taylor,2012-12-06 Janos Kornai The collapse of the socialist system in eastern Europe and the Soviet Union is one of the major events of this century perhaps the most important of all The transformation now taking place is without any precedent in history The original development of capitalism was a process that lasted for centuries The almost total liquidation of capitalism in the countries ruled by communist parties took place in historical terms in a very short period of time but it was carried out by force and repressive methods The transformation which has now begun is diverting these countries back onto the path of capitalist development and the hope is that the process will take place much faster than the original emergence of capitalism And another hope can be expressed that the governments of these countries will not resort during the process to the arsenal of political violence and repression in order to speed it up Although the post socialist transformation is a historically unique phenomenon some components and features of it show a similarity with other processes or events that took place under other circumstances Other empires before the Soviet empire collapsed The political structures of other countries took the path from dictatorship to democracy Under other conditions state assets have been privatized inflation has been curbed foreign capital has flowed in new oligopolies have formed and so on The uniqueness lies in the new specific configuration of these component processes

and many other phenomena      **Economies in Transition** Ian Jeffries, 2013-05-13 This volume provides an in depth review of major economic developments in those economies which are in some stage of transition following the collapse of communism in the Eastern block The book is divided into four parts theoretical issues in the transition from command to market economies the events in the fifteen independent countries of the former Soviet Union Eastern Europe non European states In all the author chronicles events from 1993 to 1995 in thirty five countries Economic developments are set in their political context and presented chronologically as far as possible A Guide to the Economies in Transition carries on where Ian Jeffries previous book left off The work is entirely new and as such can be seen as a companion to the earlier title These books are becoming known as invaluable guides providing unique levels of reference in work of this type
