*Towards a Competence Theory of the Firm* Nicolai J. Foss, Christian Knudsen, 2013-12-02 This book explores a new theory of the firm produced through an exchange between management theory and economics In the process economics is seen to provide a foundational element for strategy research whilst developing a more realistic theory of the firm with a greater emphasis on its internal features The success of competence theories of the firm also reflects their ability to explain significant trends in the business world notably the declining importance of conglomerates and critical features in the success of Asian and Japanese business

A General Theory of Economic Development Sung-Hee Jwa, 2017-06-30 This book makes the bold attempt at proposing a new general theory of economic development The main premise is that economic institutions and policies must embody economic discrimination if there is to be any chance of real economic development By economic discrimination the author means treating differences differently by selecting and supporting economic entities and behaviour that contribute positively to the economy The book identifies markets government and corporations as the holy trinity of economic development that is the three most important institutions that must work together via economic discrimination to steer the economy towards real transformative progress The book also warns against the current trend of economic egalitarianism or not treating differences differently because it destroys economic incentives and results in an array of economic problems including growth stagnation

**The Theory of the Firm** Paul Walker, 2016-09-13. Firms are a ubiquitous feature of the economic landscape, with much of the activity undertaken within an economy taking place within their boundaries. Given the size of the contribution made by firms to economic activity, employment, and growth, having a theoretical understanding of the nature and structure of firms is crucial for understanding how an economy functions. The Theory of the Firm firstly offers a brief overview of the past, consisting of a concise discussion of the classical view of production, followed by an outline of the development of the neoclassical or textbook approach to firm-level production. Secondly, the present of the theory of the firm is discussed in three sections. The first section considers the post-1970 theory of the firm literature per se, while the second section scrutinises the relationship between the three most prominent of the modern sets of theories: the reference point, property rights, and transaction cost approaches. The third section looks at the theory of privatisation. The unique aspects of this book include its discussions of the post-1970 contributions to the theory of the firm, the integration of the theory of the entrepreneur with the theory of the firm, and the theory of privatisation. This volume offers an intuitive introduction to the theories of the firm, as well as simple formal models of the most important contributions to the literature. It also outlines the historical evolution of the traditional and modern theories of the firm. This book is of great interest to those who study the history of economic thought.

Innovation entrepreneurship knowledge and human capital are widely acknowledged as key levers of development. Yet what are the sources of these factors and why do they differ in their endowment across regions? Motivated by a belief that theories of economic development can move beyond the generally accepted explanations of location and the organization of industries and capital, this book establishes a behavioural theory of economic development illustrating that differences in human behaviour across cities and regions are a significant deep rooted cause of uneven development. Fusing a range of concepts relating to culture, psychology, human agency, institutions and power, it proposes that the long term differentials in economic development between cities and regions both within and across nations is strongly connected to the underlying forms of behaviour enacted by humans on an individual and collective basis. Given a world of finite and limited resources coupled with a rapidly growing population especially in cities and urban regions, human behaviour and the expectations and preferences upon which it is based are central to understanding how notions of development may change in coming years. This book provides a novel theory of the role of psychocultural context and human behavioural and institutional frameworks in uneven economic development on a global scale.

Economic Growth in Developing Countries M.L. Lakhera, 2016-01-28 Economic growth across countries during the last 30 years or so has displayed dual divergence between developed and developing countries and among developing countries. The structural transformation has been either slow or of an anomalous nature. The study addresses these and suggests how they can catch up with the developed world.
