Milter, John E. Stinson, Wim H. Gijssels, 2013-03-09. Almost thirty years ago, a friend involved in the education profession told me that in his estimation, much more was caught by students outside of classrooms than was taught within those hallowed walls. This statement has stuck with me through years of personal schooling, working as a high school teacher, working in management, serving as a management consultant and trainer, and facilitating learning on university campuses across the US, eastern Europe, and Asia. Learning by doing is certainly something most people have experienced. But the fact that there is more opportunity to learn more things today than ever before, with knowledge doubling every 20 months, makes learning by doing more complicated. As organizations move to respond to the rapid changes in their environments, people within those organizations must face the uncertainty and ambiguity that comes with such conditions. The one thing most futurists agree on is that the future will be very different than the present. Exponential change has become commonplace. Companies used to worry about redefining their goals and specific descriptions of their place in an industry. Today, in order to survive, they must be constantly addressing the issues inherent in redefining their industries. *Business Economics* Rob Dransfield, 2024-10-21. *Business Economics* introduces the theory and practice of economics for non-specialist students new to the topic. This second edition of *Business Economics* is designed to provide a general introduction to the discipline of business economics, covering an important part of first-year studies and beyond. The new edition retains the successful structure of the previous edition but, like any good business economics text, includes new and updated case studies and examples to reflect present-day economic global realities. Suitable for introductory-level students who are seeking a comprehensive but accessible way into the subject, *Business Economics* is bolstered by a host of activities, review questions, and further reading, making it the ideal choice for undergraduate students and lecturers.

Escalation in Decision-making Helga Drummond, Julia Hodgson, 2011. When a venture seems to be faltering, do you persist and hope that things will get better, or do you cut your losses? Rich in case studies involving real business decisions and dilemmas, *Escalation in Decision Making* reveals why social scientists believe that owners may not respond rationally to such predicaments. Instead of exiting when the odds are clearly stacked against them, they re-invest and end up compounding their losses, a phenomenon known as escalation of commitment. *Escalation in Decision Making* is widely relevant to practitioners such as project managers in large organizations and to those responsible for managing risk in many situations.
