Economics Institutions Analysis:

Toward a Comparative Institutional Analysis Masahiko Aoki, 2023-12-26 A conceptual and analytical framework for understanding economic institutions and institutional change Markets are one of the most salient institutions produced by humans and economists have traditionally analyzed the workings of the market mechanism Recently however economists and others have begun to appreciate the many institution related events and phenomena that have a significant impact on economic performance Examples include the demise of the communist states the emergence of Silicon Valley and e commerce the European currency unification and the East Asian financial crises In this book Masahiko Aoki uses modern game theory to develop a conceptual and analytical framework for understanding issues related to economic institutions The wide ranging discussion considers how institutions evolve why their overall arrangements are robust and diverse across economies and why they do or do not change in response to environmental factors such as technological progress global market integration and demographic change

Economic Analysis of Institutions and Systems Svetozar Pejovich, 1995 Economic Analysis of Institutions and Systems aims to redirect the study of what was previously referred to as comparative economic systems toward analysis of the history and development of institutions and the effects of alternative institutional arrangements on economic behavior To this end the book internalizes into a theoretical framework i the effects of alternative institutions on the costs of transactions and incentive structures ii the effects of the costs of transactions and incentives on economic behavior and iii the evidence for refutable implications of those effects In the process it provides the logical premises for various institutions from which refutable implications can be deduced

The Evolution of Economic Institutions Geoffrey

Martin Hodgson, 2007-01-01 This volume documents in a unique manner the momentum the institutionalist evolutionary research agenda has regained over the past two decades. The thought provoking contributions come from prominent authors with a rather heterogeneous theoretical background. Nonetheless they all convene in elaborating on issues that have always been at the core of the institutionalist agenda and show how these issues relate to cutting edge research in modern economics. Ulrich Witt, Max Planck Institute of Economics, Jena, Germany. This excellent EAEPE Reader brings together a range of perspectives on the role of institutions in economics. It is very well structured with parts on microeconomics, macroeconomics, markets and economic evolution. Each part contains chapters written by renowned experts in their respective fields and there is an authoritative introductory chapter by the editor. This Reader is invaluable for economics students and academic economists wishing to better understand how institutions and individual behaviours interact in the economic system. Much of standard economic analysis either ignores institutions or makes overly restrictive assumptions about them; the authors in this book show persuasively that economics without an adequate treatment of institutions and institutional change is of very little scientific worth. John Foster, The University of Queensland, Australia. This is a great set of essays. To get the richness they contain the reader must be already familiar with the broad orientation of the literature on economic institutions. Given that background I can think of no collection or essays that frame, illuminate and probe modern institutional economics as well as does this set. Geoffrey Hodgson, who chose the collection and the authors of the essays, are to be congratulated and thanked. Richard R. Nelson, Columbia University, US. It is now widely acknowledged that institutions are a crucial factor in economic performance. Major developments have been made in our understanding of the nature and evolution of economic institutions in the last few years. This book brings together some key contributions in this area by leading internationally renowned scholars including Paul A. David, Christopher Freeman, Alan P. Kirman, Jan Kregel, Brian J. Loasby, J. Stanley Metcalfe, Bart Nooteboom and Ugo Pagano. This essential reader covers topics such as the relationship between institutions and individuals, institutions and economic development, the nature and role of markets and the theory of institutional evolution. The book not only outlines cutting edge developments in the field but also indicates key directions of future research for institutional and evolutionary economics. Vital reading on one of the most dynamic and rapidly growing areas of research today. The Evolution of Economic Institutions will be of great interest to researchers, students and lecturers in economics and business studies.

Institutions and Economic Theory Eirik G. Furubotn, Rudolf Richter, 2005-10-21

This second edition assesses some of the major refinements, extensions and useful applications that have developed in neoinstitutionalist thought in recent years. More attention is given to the overlap between the New Institutional Economics and developments in economic history and political science. In addition to updated references, new material includes analysis of parallel developments in the field of economic sociology and its attacks on representatives of the NIE as well as an explanation of the institution as an equilibrium of game approach. Already an international best seller, Institutions and

Economic Theory is essential reading for economists and students attracted to the NIE approach. Scholars from such disciplines as political science, sociology, and law will find the work useful as the NIE continues to gain wide academic acceptance. A useful glossary for students is included.

Eirik Furubotn is Honorary Professor of Economics, Co-Director of the Center for New Institutional Economics, University of Saarland, Germany, and Research Fellow, Private Enterprise Research Center, Texas A M University. Rudolph Richter is Professor Emeritus of Economics and Director of the Center for New Institutional Economics, University of Saarland, Germany.

This important volume presents a systematic analysis of the Bloomington Institutional and Development IAD Research Program that developed a unique and extremely successful combination of interdisciplinary theoretical and empirical approaches for the study of social sciences.

Economic Institutions and Democratic Reform Ole Nørgaard, 2000. Using primary quantitative data and statistical analyses, this book argues that there is no universally applicable strategy for economic reform and that popular democracy rather than a president or executive is often the foundation of a successful economy.

Economic Analysis of Liability Rules Satish Kumar Jain, 2014-12-01. This book focuses on the analysis of liability rules of tort law from an efficiency perspective, presenting a comprehensive analysis of these rules in a self-contained and rigorous yet accessible manner. It establishes general results on the efficiency of liability rules, including complete characterizations of efficient liability rules and efficient incremental liability rules. The book also establishes that the untaken precaution approach and decoupled liability are incompatible with efficiency. The economic analysis of tort law has established that for efficiency, it is necessary that each party to the interaction must be made to internalize the harm resulting from the interaction. The characterization and impossibility theorems presented in this book establish that, in addition to internalization of the harm by each party, there are two additional requirements for efficiency. Firstly, rules must be immune from strategic manipulation. Secondly, rules must entail closure with respect to the parties involved in the interaction, giving rise to the negative externality, i.e., the liability must not be decoupled.

Advances in Economics and Econometrics: Theory and Applications Econometric Society, World Congress, 1997-02-20. Designed to make the material accessible to a general audience of economists, these volumes should be helpful to anyone with a good undergraduate training in economics who wishes to follow new ideas and tendencies in the subject.

Internationalisation and Economic Institutions Mark Thatcher, 2007-07-19 This book examines when how and why internationalisation affects national economic institutions It confronts questions at the heart of debates in political economy and comparative politics What does internationalisation of markets mean Who are its carriers in domestic arenas Through which mechanisms does it affect decisions about national institutional reform What are institutional outcomes in the face of internationalisation The book responds to its questions by looking at key economic institutions in five strategic sectors securities trading telecommunications electricity airlines and postal services It compares across four countries that represent different varieties of capitalism namely Britain France Germany and Italy over the period between 1965 and 2005 Thus it combines cross national historical and cross sectoral comparisons The author distinguishes technological and economic forms of internationalisation from policy forms notably decisions in powerful overseas nations and supranational regulation He argues that contrary to expectations the first was met with institutional inertia In contrast policy forms of internationalisation namely reforms in the US and European Union regulation played significant roles in undermining long standing national institutions The book explores the mechanisms whereby policy forms of internationalisation were influential by looking at the strategies coalitions and resources of key actors in national arenas It also shows that institutional outcomes were surprising all four countries albeit through different routes adopted increasingly similar reforms of economic institutions privatisation the ending of monopolies and delegation to independent regulatory agencies The book rejects the view that technological and economic forms of internationalisation drive institutional change It suggests that policy forms of internationalisation are more important because they become part of domestic decision making and aid the reform of well established national institutions
