## **Feedback Based Orthogonal Digital Filters Theory Applications And Implementation:**

**Feedback-Based Orthogonal Digital Filters** Mukund Padmanabhan, Kenneth W. Martin, Gábor Péceli, 1996 Feedback Based Orthogonal Digital Filters Theory Applications and Implementation develops the theory of a feedback based orthogonal digital filter and examines several applications where the filter topology leads to a simple and efficient solution The development of the filter structure is linked to concepts in observer theory Several signal processing problems can be represented as estimation problems where a parametric representation of the input is used to try and replicate it locally This estimation problem can be solved using an identity observer and the filter topology falls in this framework Hence the filter topology represents a universal building block that can find application in several problems such as spectral estimation time recursive computation of transforms etc Further because of the orthogonality constraints satisfied by the structure it also represents a robust solution under finite precision conditions The book also presents the observer based viewpoint of several signal processing problems and shows that problems that are typically treated independently in the literature are in fact linked and can be cast in a single unified framework In addition to examining the theoretical issues the book describes practical issues related to a hardware implementation of the building block in both the digital and analog domain On the digital side issues relating to implementation using semi custom chips FPGA s and ASIC design are examined On the analog side the design and testing of a fabricated chip that functions as a multi sinusoidal phase locked loop are described Feedback Based Orthogonal Digital Filters serves as an excellent reference May be used as a text for advanced courses on the subject

**Modelling and Identification with Rational Orthogonal Basis Functions** Peter S.C. Heuberger, Paul M.J. van den Hof, Bo Wahlberg, 2005-12-06 Models of dynamical systems are of great importance in almost all fields of science and engineering and specifically in control signal processing and information science A model is always only an approximation of a real phenomenon so that having an approximation theory which allows for the analysis of model quality is a substantial concern The use of rational orthogonal basis functions to represent dynamical systems and stochastic signals can provide such a theory and underpin advanced analysis and efficient modelling It also has the potential to extend beyond these areas to deal with many problems in circuit theory telecommunications systems control theory and signal processing Modelling and Identification with Rational Orthogonal Basis Functions affords a self contained description of the development of the field over the last 15 years furnishing researchers and practising engineers working with dynamical systems and stochastic processes with a standard reference work

**Measurement and Data Science** Gábor Péceli, 2021-01-06 Nowadays all of us enjoy the worldwide revival of measurement and data science caused by the revolution of sensory devices and the amazing data transmission storage and processing capabilities available and embedded everywhere Thanks to the unbelievable amount of recorded information and the theoretical results of measurement and data science a great deal of newly developed products invade our surroundings and enable previously unconceivable smart services and support This volume consists of a number of chapters covering the scientific results of researchers working in this field at the Department of Measurement and Information Systems of the Budapest University of Technology and Economics Hungary The book reports research results attained by carefully combining some of the classical theories of measurement and data processing These new approaches and methods contribute to higher quality measurement design and measured data evaluation and provide hints to find efficient implementations for instrumentation
