## **Fermi Solution Essays On Science:**

The Fermi Solution Hans Christian Von Baeyer, 2001-01-01 Engrossing journey through the workings of the universe and minds of today's scientific thinkers examines an extraordinary range of topics from the Superconducting Super Collider and the mysteries of the Big Bang to strange crystals with impossible structures and the quest for the temperature of absolute zero. A richly satisfying work teeming with the drama of scientific research and the thrill of discovery will appeal to scientists and laypeople alike.

**112 Mercer Street** Burton Feldman, 2007 In 1944 Albert Einstein invited three close friends, giants of contemporary science and thought, to his home at 112 Mercer Street in Princeton, New Jersey, to discuss science, philosophy, and world events. These were Bertrand Russell, the incomparable logician, philosopher, and humanist; Wolfgang Pauli, the great physicist; and Kurt Godel, the groundbreaking logician. Using these historic meetings as a starting point, Burton Feldman provides a highly original examination of these four very outsized personalities as friends, colleagues, and rivals, particularly the stubborn and supremely self-confident Einstein and the aristocratic Russell. Masterfully researched, this accessible book illuminates the feelings of these great men about the world of science that was then beginning to pass them by and about the dawning atomic age that terrified them all.

Synthesizing Systems Anna Darden Copeland, 2007-02-22 The purpose of this dissertation is to introduce a general reading audience to the major themes found in the fiction of Richard Powers with an emphasis on his use of science. For Powers, science is something more than the accumulation of technical data and the proliferation of theories developed to explain physical phenomena. It is an evolving body of knowledge which has important insights to contribute into the conditions which ground human experience. The close and often detailed discussions of contemporary issues in science which Powers incorporates into his fiction indicate the extent to which he sees science as an inseparable component in any attempt to understand the complexities of human experience. The common ground Powers uses to link the interests of science and those of fiction into a balanced, if not always harmonious, pursuit of truth is wonder. The limitations placed on science during this century do not undermine the ability of science to influence what we can know. Nor do these limitations diminish the ability of science to inspire wonder. Quite the opposite. For Powers, the true wonder of the human intellect rests in our remarkable ability to balance observation and interpretation. What he discovers again and again in his fiction is that science, like literature, is a product of the human imagination, a way to mediate between the world and our perceptions of it. The recognition that science is a cultural practice, a body of knowledge thoroughly imbued with the practices and prejudices of its historical surroundings, is a necessary first step in mending the rift separating science and literature, head and heart. The greatest insight of twentieth-century science may just be the recognition that there are other ways to access the truth. Richard Powers' skillful weaving of science and art is a testament that literature offers a unique vantage point from which we might learn something of value about ourselves and the world we inhabit.

*The Exact Sciences in Antiquity* Otto Neugebauer,1969-01-01 Based on a series of lectures delivered at Cornell University in the fall of 1949 and since revised this is the standard non technical coverage of Egyptian and Babylonian mathematics and astronomy and their transmission to the Hellenistic world Entirely modern in its data and conclusions it reveals the surprising sophistication of certain areas of early science particularly Babylonian mathematics After a discussion of the number systems used in the ancient Near East contrasting the Egyptian method of additive computations with unit
