Century Andrew Bush, Eric W. F. W. Alton, J.C. Davies, U. Griesenbach, A. Jaffé, 2006 Cystic fibrosis used to be thought of as a respiratory and digestive disease with a uniformly and rapidly fatal outcome The spectrum of the disease has broadened into the mild atypical case presenting in middle age with the potential for complications in virtually every system of the body In the past few years there has been an explosion of knowledge of the basic science of the defect The editors have therefore invited the leading scientists and clinicians in the field of cystic fibrosis to describe the recent advances in this disease Although there are many Recent Advances texts previous books have been selective in their choice of topics This book is the first to cover the entire field of this complex disease and encompasses the rapidly moving topics of the basic molecular and cellular biology as well as the recent multi system multi disciplinary advances in the clinical care of patients The authors have been charged with writing only about new developments and not to rehash old literature The bulk of the references is therefore less than five years old This book addresses all professionals who treat cystic fibrosis and want to have an update of new findings in the field particularly of those outside their immediate specialisation It will also be useful for basic researchers interested in related scientific areas and the clinical context of their work *A.I.D.
