Fertilizer Sulfur And Food Production:

Fertilizer sulfur and food production Mohinder Mudahar, 2013-04-17 Fertilizer is a vital component of strategies for expanding food production. The rapid growth in population and the widening food deficits in many tropical countries of Asia, Africa and Latin America call attention to those aspects of fertilization that have been neglected but are expected to yield large economic payoffs in the future. Fertilizer sulfur falls into this category. In the past, fertilizer sulfur received little attention from researchers and policymakers since sulfur deficiency was not considered a serious problem. It was not a problem because of low crop yields, extensive cropping, and the incidental supply of sulfur through rain, irrigation water, manures, and sulfur-containing fertilizers. However, the situation has changed in the last three decades. Modern agriculture based on high crop yields, intensive cropping, improved crop varieties, and greater use of sulfur-free fertilizers and environmental regulations restricting sulfur emissions are creating large gaps between sulfur supply and sulfur requirements. Sulfur deficiencies are widespread and growing. Consequently, the full potential of a modern agricultural system in tropical countries is not being realized. This research effort results from the recognition of the seriousness of the sulfur problem and its adverse impact on food production as well as IFDC's dedication to the development and transfer of economically efficient fertilizer technology to tropical countries. This study represents a comprehensive analysis of the technical and economic linkages between fertilizer sulfur and food production and it provides guidelines for future directions in fertilizer sulfur research and public policy. **Fertilizer Sulfur and Food Production** Mohinder Mudahar, 2014-01-15

Vlek, 2012-12-06 Food security, one of the basic human rights, seems to be ever eluding the people of sub-Saharan Africa. With each occurrence of crop failure, agriculturalists around the world are awakened to the challenge of ensuring stable adequate food production in the tropical African environments. The International Fertilizer Development Center (IFDC) with its mandate of alleviating food shortages through judicious use of fertilizers formulated a program to study fertilizer use strategies for sub-Saharan Africa. With generous financial assistance from the International Fund for Agricultural Development (IFAD), IFDC in collaboration with the International Crop Research Institute for the Semi-Arid Tropics (ICRISAT) and the International Institute for Tropical Agriculture (IITA) initiated a research project aimed at assessing means to remedy soil nutrient deficiencies that constrain food production in the humid, subhumid, and semiarid tropics of Africa. The results of this project were summarized during a
