Feeding Time:

Feeding Time Steven Roesch, 2021-12-13 Tribble dove straight down into the pizza landing there with a distinct thump Extricating himself was no easy matter given that I d ordered extra cheese this time around Whenever he pulled up one of his paws and made a bid for freedom a ribbon of viscous cheese came up with him The more he tried to free himself the more the cheese spread over his front paws face and fur The dilemma was beyond his ken and it showed in his befuddled eyes and frantic meows Only with my help could he get free and cleaning him off thoroughly took the better part of an hour

Alexander, 1999-01-28 The Oxford Animal Biology Series is an innovative new series of supplementary undergraduate texts in comparative animal biology Topics within each book are addressed using examples from throughout the animal kingdom looking for parallels that transcend taxonomy Further reading sections will guide the student into the literature at greater depth The series will be international in scope both in terms of the species used as examples and in references to scientific work Energy for Animal Life the first book in the series is about how animals get energy and how they use it a central topic in our understanding of animal biology Life depends on energy and much of the activity of animals is devoted to getting the food which is their energy source It encompasses the food chain from solar radiation and photosynthesis to food sources for herbivores and for carnivores and compares the merits of different designs of digestive system and of different strategies for finding and choosing food Of course animal energy isn t simply a question of feeding and several chapters in turn look at energy use The energy costs of motion of running swimming and flight are discussed in one chapter and the energetic

demands of growth and reproduction in another A chapter on body temperature shows how the processes of life go faster at higher temperatures and discusses how animals regulate their temperature A final chapter draws all of these aspects of energy use together and considers the energy budgets of several different animals assessing the different energy gains and costs of their everyday activities in the wild The book is truly comparative drawing on examples from a wide range of animal species and lots of practical information on relevant experiments is included The style is very accessible and suitable as supplementary reading for first and second year undergraduates taking a degree course in biological sciences *Care and Nutrition* Patrice L.
