13 hypotheses in the presentation of their own ideas about the causes of men's violence against women. In the concluding chapter the editors summarize the contributors' reactions to the original hypotheses by creating a revised multivariate model of risk factors for men's violence against women. The final model includes biological, socialization, psychological, psychosocial, relational, and macrosocietal factors. Furthermore, the model is explained through 13 theoretical propositions, 40 research hypotheses, and over 60 risk variables related to men's violence against women. The book closes with a discussion of men's protective resiliency and vulnerability factors as well as future directions for theory development, advocacy, and the prevention of violence against women.

An Introduction to Criminological Theory Roger Hopkins Burke, 2018-11-01. This book provides a comprehensive and up-to-date introduction to criminological theory for students taking courses in criminology at both undergraduate and postgraduate level. Building on previous editions, this book presents the latest research and theoretical developments. The text is divided into five parts, the first three of which address ideal type models of criminal behaviour: the rational actor, predestined actor, and victimized actor models. Within these, the various criminological theories are located chronologically in the context of one of these different traditions, and the strengths and weaknesses of each theory and model are clearly identified. The fourth part of the book looks closely at more recent attempts to integrate theoretical elements from both within and across models of criminal behaviour, while the fifth part addresses a number of key recent concerns of criminology: postmodernism, cultural criminology, globalization, and communitarianism, the penal society, southern criminology, and critical criminology. All major theoretical perspectives are considered, including classical criminology, biological and psychological positivism, labelling theories, feminist criminology, critical criminology, and left realism, situation action, desistance theories, social control theories, the risk society, postmodern condition, and terrorism. The new edition also features comprehensive coverage of recent developments in criminology, including the myth of the crime drop, the revitalization of critical criminology, and political economy, shaming, and crime defiance theory, coerced mobility theory, and new developments in social control and general strain theories. This revised and expanded fifth edition of *An Introduction to Criminological Theory* includes chapter summaries, critical thinking questions, policy implications, a full glossary of terms and theories, and a timeline of criminological theory, making it essential reading for those studying criminology and taking courses on theoretical criminology, understanding crime and crime and deviance.
