Annelies Wilder-Smith

Festschrift Adolph Wullner Juni 1905:

Festschrift Adolph Wüllner gewidmet zum siebzigsten Geburtstage, 13. Juni 1905, von der Königl. Technischen Hochschule zu Aachen, ihren früheren und jetzigen Mitgliedern Adolph Wüllner,1905 *International Catalogue of Scientific Literature, 1901-1914* ,1908 **International Catalogue of Scientific Literature** ,1907

Bulletin of the American Mathematical Society ,1905 **Hornbostel Opera Omnia** K.P. Wachsmann,D. Christensen,H.-P. Reinecke,2012-12-06 **Establishing Quantum Physics in Munich** Michael Eckert,2020-12-15 This book traces the history of Arnold Sommerfeld's famous nursery of theoretical physics at the University of Munich and demonstrates the centrality of developing personal and institutional networks for the emergence of quantum theory. Sommerfeld originally a mathematician with little interest in theoretical physics was a somewhat unlikely choice for a chair of theoretical physics when he was appointed in 1906. However he quickly reoriented his research focus towards physics, fostering a keen interest in experimental research. Possibly even more important for the development of quantum theory in the coming years was his exceptional talent as a charismatic teacher and prolific networker which turned Munich into a central node in the fast growing network of quantum physicists in the 1920s. It is no coincidence that the two most talented child prodigies of 1920s quantum physics, Wolfgang Pauli and Werner Heisenberg, were his students, nor that by the end of the decade about a dozen of Sommerfeld's former disciples held chairs in theoretical physics. The book is directed at historians of science and physics as well as all those interested in the history of science, diplomacy and networking. The book is part of a series of publications on the early network of quantum physics. These works emerged from an expansive study on the quantum revolution as a major transformation of physical knowledge undertaken by the Max Planck Institute for the History of Science and the Fritz Haber Institute. 2006-2012. For more on this project see the dedicated Feature Story: The Networks of Early Quantum Theory at the Max Planck Institute for the History of Science <https://www.mpiwg-berlin.mpg.de/feature-story/networks-early-quantum-theory>. The Scientific Correspondence of H.A. Lorentz A.J. Kox,2008-09-18 This volume presents a selection of 434 letters from and to the Dutch physicist and Nobel Prize winner Hendrik Antoon Lorentz, 1853-1928, covering the period from 1883 until a few months before his death in February 1928. The sheer size of the available correspondence, approximately 6000 letters from and to Lorentz, preclude a full publication. The letters included in this volume have been selected according to various criteria, the most important of which is scientific importance. A second criterion has been the availability of letters both from and to Lorentz so that the reader can follow the exchange between Lorentz and his correspondent. Within such correspondences a few unimportant items dealing with routine administrative or organizational matters have been omitted. An exception to the scientific criterion is the exchange of letters between Lorentz and Albert Einstein, Max Planck, Woldemar Voigt and Wilhelm Wien during World War I; these letters have been included because they shed important light on the disruption of the scientific relations during the war and on the political views of

these correspondents as well as of Lorentz similar reasons the letters exchanged with Einstein and Planck on post war political issues have been included Biographical sketch Hendrik Antoon Lorentz was born on July 18 1853 in the Dutch town of Arnhem He was the son of a relatively well to do owner of a nursery

Revue Semestrielle Des Publications Mathematiques ,1905

Arnold Sommerfeld Michael Eckert,2013-06-24 The subject of the book is a biography of the theoretical physicist Arnold Sommerfeld 1868 1951 Although Sommerfeld is famous as a quantum theorist for the elaboration of the semi classical atomic theory Bohr Sommerfeld model Sommerfeld s fine structure constant his role in the history of modern physics is not confined to atoms and quanta Sommerfeld left his mark in the history of mathematics fluid mechanics a number of physical subdisciplines and in particular as founder of a most productive school Peter Debye Wolfgang Pauli Werner Heisenberg Linus Pauling and Hans Bethe were his pupils to name only the Nobel laureates among them This biography is to a large extent based on primary source material correspondence diaries unpublished manuscripts It should be of particular interest to students who are keen to know more about the historical roots of modern science Sommerfeld lived through turbulent times of German history Wilhelmian Empire Weimar Republic Nazi period His life therefore illustrates how science and scientists perform in changing social environments From this perspective the biography should also attract readers with a general interest in the history of science and technology
