There is increasing interest in the fascinating insights into the biologic mechanisms of aging errors in protein synthesis DNA repair mechanisms alterations of the neuroendocrine system changes in the immune system genetic controls and somatic mutations Second the demographic reason this is the century of old age There has been a 26 year gain in the average life expectancy This gain compares with that acquired from 3 000 years B C the Bronze Age to the year 1900 which was about 29 years Therefore in one century there has been a gain in the average life expectancy almost equal to 5 000 previous years of human history In 1830 one of three newborn infants survived beyond 60 years of age Geriatric Medicine Christine K.
