Wetting: Theory and Experiments, Two-Volume Set Eli Ruckenstein, Gersh Berim, 2019-12-17 Wetting Theory and Experiments collates papers published by Professor Eli Ruckenstein and his coworkers on the theoretical and experimental investigation of wetting of solid surfaces It contains six chapters each of which is preceded by a short introduction The papers are selected according to the specific features being considered and they are arranged in logical rather than chronological order The book focuses on wetting on the nanoscale nanodrops on solid surfaces liquid in the nanoslit considered on the basis of microscopic density functional theory and to dynamics of fluid on the solid surface considered on the basis of hydrodynamic equations Along with this experimental studies of wetting related to various applications are presented Russian Politics Zoltan D. Barany, Robert G. Moser, 2001-08-27 What went wrong in Russia s decade old post communist transition A group of leading young scholars answer this question by offering assessments of five crucial political arenas during the Yeltsin era elections executive legislative relations interactions between the central state and the regions economic reforms and civil military relations All of the contributors recognize that adverse historical legacies have complicated Russian democratization They challenge structural explanations that emphasize constraints of the pre existing system however and concentrate instead on the importance of elite decisions and institution building The authors agree that

elites failure to develop robust political institutions has been a central problem of Russia's post communist transition. The weakness of the state and its institutions has contributed to a number of serious problems threatening democratic consolidation. These include the tensions between the executive and the legislature, the frail infrastructure for successful market reform and the absence of proper civilian control over the armed forces.

Industrial Transition Martina Fuchs, 2016-05-23. Recently the international division of labour in industrial production has grown increasingly more volatile. The separation between high end tasks undertaken in the traditional core economies and low end tasks undertaken in newly emerging economies has become increasingly blurred. The new dynamics and unpredictability of actor and process configurations in internationalized production bring new challenges for research in economic geography, regional economics and management sciences. The allocation of R and how can regional resilience and response capacities be built and enhanced?

Ethnic Diversity and Public Policy C. Young, 2016-07-27. In recent years the saliency of conflicts pitting different ethnic, racial and religious groups against one another has increased dramatically. The world of nation states is much more diverse than previously realized; only a small number of the 185 independent countries are truly homogeneous. With the end of the cold war the relative importance of ethnic conflicts as a threat to international peace and stability is far greater. An international set of scholars collaborate in this volume to explore policy alternatives which can contribute towards the accommodation of cultural diversity.

Changing Regional Alliances for China and the West David Lane, Guichang Zhu, 2017-11-15 Since the end of the World War II nation states have formed regions to give them some protection from the processes of globalization and internationalization Against this background the contributors consider the position of China in the processes of regional competitive interdependency This book offers analysis at three levels internal regional and global Chapters consider China s position in regional post socialist associations such as the BRICS the Shanghai Cooperation Organization SCO the Eurasian Economic Union EEU the Silk Road Economic Belt and the One Belt One Road OBOR Contributors discuss how membership in these regional bodies is likely to enhance China s economic power strategic position and political importance A major theme addressed is whether these new powers will become complementary to the American led economic core countries or evolve as countervailing powers Contributors suggest that linkages favored by China s regional associations are more network based and informal in character They are more in keeping with regionalization rather than regional blocs such as the European Union which have locked in members to market driven institutions Thus these new developments move away from a neo liberal market perspective and satisfy the needs of members to retain their economic and political sovereignty This book considers whether these new regional blocs led by China will perform a transformative process for the international order or become an alternative supplementary to but not replacing the existing institutions of the North An important topic is the relationship of Russia and China to the Central Asian countries of the former USSR and the interaction between the Russia led Eurasian Economic Union and the Chinese initiative of the Silk Road Economic Belt There is potential for the evolution of an alliance between China and Russia against the neo liberal order led by the USA Concurrently they bring out possible the tensions between Russia s and China s conflicting interests over influence in Central Asia Reactions to China s rise include the Trump administration s movement from a multilateral to a bi lateral trade policy and the threat of

discriminatory tariffs for China The contributors seek to promote a better appreciation of China's role in regional associations and the implications of contemporary developments in economic geo political and international political affairs in the 21st century *FCC Record* United States.
