Operational Research and Systems Paul Keys, 2013-06-29 Contemporary Systems Thinking is a series of texts each of which deals comparatively and or critically with different aspects of holistic thinking at the frontiers of the discipline Traditionally writings by systems thinkers have been concerned with single theme propositions such as general systems theory cybernetics operations research system dynamics soft systems methodology and many others Recently there have been attempts to fulfil a different yet equally important role by comparative analyses of viewpoints and approaches each addressing disparate areas of study such as modeling and simulation measurement management problem solving methods international relations social theory and last but not exhaustively or least philosophy In a recent book these were drawn together within a multiform framework as part of an eclectic discussion a nearly impossible task as I discovered see *Dealing with Complexity An Introduction to the Theory and Application of Systems Science* by R L Flood and E R Carson Nevertheless bringing many sources together led to several achievements among which was showing a great diversity of approaches

ideas and application areas that systems thinking contributes to although often with difficulties remaining unresolved More important however while working on that manuscript I became aware of the need for and potential value in a series of books each focusing in detail on the study areas mentioned above
