Future Of Architecture:

The Future of Architecture in 100 Buildings Marc Kushner, 2015-03-10 The founder of Architizer.com and practicing architect draws on his unique position at the crossroads of architecture and social media to highlight 100 important buildings that embody the future of architecture. We're asking more of architecture than ever before; the response will define our future. A pavilion made from paper. A building that eats smog. An inflatable concert hall. A research lab that can walk through snow. We're entering a new age in architecture, one where we expect our buildings to deliver far more than just shelter. We want buildings that inspire us while helping the environment, buildings that delight our senses while serving the needs of a community, buildings made possible both by new technology and repurposed materials. Like an architectural cabinet of wonders, this book collects the most innovative buildings of today and tomorrow. The buildings hail from all seven continents to say nothing of other planets, offering a truly global perspective on what lies ahead. Each page captures the soaring confidence, the thoughtful intelligence, the space-age wonder, and at times the sheer whimsy of the world's most inspired buildings and the questions they provoke. Can a building breathe? Can a skyscraper be built in a day? Can we 3D print a house? Can we live on the moon? Filled with gorgeous imagery and witty insight, this book is an essential and delightful guide to the future being built around us, a future that matters more and to more of us than ever.

Building (in) the Future Peggy Deamer, Phillip Bernstein, 2010-03-03 Thirty-four contributors, including designers, engineers, fabricators, contractors, construction managers, planners, and scholars, examine how contemporary practices of production are reshaping the design construction process. Through observations, arguments, and detailed project explorations, contributors describe new models of practice and reorganizations of labor for the twenty-first century. Chapters include a reconsideration of craft in light of digital fabrication, an exploration of new methods of collaboration, an analysis of changes in contracts and standards, and an assessment of the new market realities of mass production and customization. **Building in the Future** includes contributions by architects James Carpenter, Mark Goulthorpe, Sheila Kennedy, Charlie Lazor, Joshua Price, Ramus, Robert A. M. Stern, and James Timberlake; BIM manager Rodd Merchant; curator Barry Bergdoll; engineer Klaus Bollinger; lawyers Howard W. Ashcraft Jr. and Chris Noble; marketing manager Ewa Magnusson; and professors Branko Kolarevic, Reinhold Martin, and Moshen Mostafavi.

The Architecture of Persistence David J. Fannon, M. Laboy, P. Wiederspahn, 2021 The *Architecture of Persistence* argues that continued human use is the ultimate measure of sustainability in architecture and that expanding the discourse about adaptability to include continuity as well as change offers the architectural manifestation of resilience. Why do some buildings last for generations as beloved and useful places while others do not? How can designers today create buildings that remain useful into the future? While architects and theorists have offered a wide range of ideas about building for change, this book focuses on persistent architecture: the material, spatial, and cultural processes that give rise to long-lived buildings. Organized in three parts, this book examines material longevity in the face of constant physical and cultural change.

connects the dimensions of human use and contemporary program and discusses how time informs the design process Featuring dozens of interviews with people who design and use buildings and a close analysis of over a hundred historic and contemporary projects the principles of persistent architecture introduced here address urgent challenges for contemporary practice while pointing towards a more sustainable built environment in the future The Architecture of Persistence Designing for Future Use offers practitioners students and scholars a set of principles and illustrative precedents exploring architecture's unique ability to connect an instructive past a useful present and an unknown future The Future of Architecture ,1955
