Three-Dimensional Velocity and Vorticity Measuring and Image Analysis Techniques Th. Dracos, 2013-06-29 The contents of this volume reflect to a large extent the efforts made by a group of Institutes at the ETH Z rich to develop new techniques for measurements of flows in fluids in the last decade The motivation came from the study of transport and mixing processes in natural and industrial systems One of the characteristic properties of turbulence is its high mixing efficiency The techniques developed are therefore suitable although not exclusively for turbulence measurements They can be subdivided into point measurements and field measurements The aim of the point measurements developed is to determine the three components of the velocity and all their first derivatives with good temporal resolution and accuracy in turbulent flows The old and well established method of hot wire anemometry was used for this purpose One of the main achievements in this context is the construction of miniature multi wire probes This technique was introduced to the Institute of Hydromechanics and Water Resources Management of ETH Z rich by Profs A Tsinober and E Kit from Tel Aviv University This was made

possible by the generous financial support by ETH for which I would like to express my gratitude on this occasion In addition Dr F E Joergensen from DANTEC contributed an example of recent developments in the hardware of Constant Temperature Anemometry CTA for which I am very thankful

Perspectives in Turbulence Studies Hans U. Meier, Peter Bradshaw, 2012-12-06 The present volume entitled Perspectives in Turbulence Studies is dedicated to Dr Ing E h Julius C Rotta in honour of his 75th birthday J C Rotta born on January 1 1912 started his outstanding career in an unusual way namely in a drawing office 1928 1931 At the same time he as a purely self taught perso took a correspondence course in airplane construction From 1934 to 1945 he worked in the aircraft industry on different subjects in the fields of flight mechanics structures air craft design and aerodynamics In 1945 he moved to Gottingen and worked from that time at the Aerodynamische Versuchsanstalt AVA now DFVLR and the Max Planck Institut fur Stromungsforschung 1947 1958 interrupted only by a stay in the U S at the Glenn L Martin Company 1954 1955 and a visiting professorship at the Laval University in Quebec Canada 1956 Already during his activities in industry Dr Rotta discovered his special liking for aerodynamics In Gottingen he was attracted by Ludwig Prandtl s discussions about problems associated with turbulence and in particular his new contribution to fully developed turbulence published in 1945 At that time W Heisenberg and C F v Weizacker published their results on the energy spectra of isotropic turbulence at large wave numbers Since that time his main research interest in reasearch has been in turbulence problems
