Fundamentals Of Ocean Acoustics:

Fundamentals of Ocean Acoustics L. Brekhovskikh, Y. Lysanov, 2013-03-14 The continents of our planet have already been exploited to a great extent Therefore man is turning his sight to the vast spaciousness of the ocean whose resources mineral biological energetic and others are just beginning to be used The ocean is being intensively studied Our notions about the dynamics of ocean waters and their role in forming the Earth's climate as well as about the structure of the ocean bottom have substantially changed during the last two decades An outstanding part in this accelerated exploration of the ocean is played by ocean acoustics Only sound waves can propagate in water over large distances Practically all kinds of telemetry communication location and remote sensing of water masses and the ocean bottom use sound waves Propagating over thousands of kilometers in the ocean they bring information on earthquakes eruptions of volcanoes and distant storms Projects using acoustical tomography systems for exploration of the ocean are presently being developed Each of these systems will allow us to determine the three dimensional structure of water masses in regions as large as millions of square kilometers

Monitoring the Comprehensive Nuclear-Test-Ban Treaty Catherine de Groot-Hedlin, John Orcutt, 2001-06 In September 1996 the United Nations General Assembly adopted the Comprehensive Nuclear Test Ban

Treaty CTBT prohibiting nuclear explosions worldwide in all environments The treaty calls for a global verification system including a network of 321 monitoring stations distributed around the globe a data communications network an international data centre IDC and on site inspections to verify compliance A global hydroacoustic monitoring system is being planned and implemented for verification of the CTBT Much of the research conducted over the past several decades on acoustic surveillance of the oceans formerly driven by the need to detect and track submarines is now being applied to the development of effective monitoring methods to verify compliance with the CTBT The aim of this volume on Hydroacoustic Monitoring of the CTBT is to summarize the research being conducted in this field and to provide basic references for future research Much of the new research emphasizes major advances in understanding the coupling of ocean acoustic waves with elastic waves in the solid Earth Topics covered include source excitation detection and classification of events generating hydroacoustic signals discrimination between underwater explosions and naturally occurring events as well as topics in coupling of acoustic to seismic wavefields
