Computing Research for Sustainability National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Computing Research for Environmental and Societal Sustainability, 2012-08-06 A broad and growing literature describes the deep and multidisciplinary nature of the sustainability challenges faced by the United States and the world Despite the profound technical challenges involved sustainability is not at its root a technical problem nor will merely technical solutions be sufficient Instead deep economic political and cultural adjustments will ultimately be required along with a major long term commitment in each sphere to deploy the requisite technical solutions at scale Nevertheless technological advances and enablers have a clear role in supporting such change and information technology IT is a natural bridge between technical and social solutions because it can offer improved communication and transparency for fostering the necessary economic political and cultural adjustments Moreover IT is at the heart of nearly every large scale socioeconomic system including systems for finance manufacturing and the generation and distribution of energy and so sustainability focused changes in those systems are inextricably linked with advances in IT The focus of

Computing Research for Sustainability is greening through IT the application of computing to promote sustainability broadly. The aim of this report is twofold to shine a spotlight on areas where IT innovation and computer science CS research can help and to urge the computing research community to bring its approaches and methodologies to bear on these pressing global challenges. Computing Research for Sustainability focuses on addressing medium and long term challenges in a way that would have significant measurable impact. The findings and recommended principles of the Committee on Computing Research for Environmental and Societal Sustainability concern four areas: 1 the relevance of IT and CS to sustainability, 2 the value of the CS approach to problem solving particularly as it pertains to sustainability challenges, 3 key CS research areas, and 4 strategy and pragmatic approaches for CS research on sustainability.

Rising to the Challenge National Research Council, Policy and Global Affairs, Board on Science, Technology, and Economic Policy, Committee on Comparative National Innovation Policies: Best Practice for the 21st Century, 2012-08-06. America's position as the source of much of the world's global innovation has been the foundation of its economic vitality and military power in the post-war. No longer is U.S. pre-eminence assured as a place to turn laboratory discoveries into new commercial products, companies, industries, and high-paying jobs. As the pillars of the U.S. innovation system erode through wavering financial and policy support, the rest of the world is racing to improve its capacity to generate new technologies and products, attract and grow existing industries, and build positions in the high technology industries of tomorrow. **Rising to the Challenge: U.S. Innovation Policy for Global Economy** emphasizes the importance of sustaining global leadership in the commercialization of innovation, which is vital to America's security, its role as a world power, and the welfare of its people. The second decade of the 21st century is witnessing the rise of a global competition that is based on innovative advantage. To this end, both advanced as well as emerging nations are developing and pursuing policies and programs that are in many cases less constrained by ideological limitations on the role of government and the concept of free market economics. The rapid transformation of the global innovation landscape presents tremendous challenges as well as important opportunities for the United States. This report argues that far more vigorous attention be paid to capturing the outputs of innovation, the commercial products, the industries, and particularly high quality jobs, to restore full employment. America's economic and national security future depends on our succeeding in this endeavor.

Science & Engineering Indicators, 2000. *OECD Science, Technology and Industry Outlook 2002* OECD, 2002-10-04. In addition to reviewing recent trends, this report identifies significant changes in science, technology, and industry policies in the OECD countries.

Predatory Value Extraction William Lazonick, Jang-Sup Shin, 2019-12-04 Predatory Value Extraction explains how an ideology of corporate resource allocation known as maximizing shareholder value MSV that emerged in the 1980s came to dominate strategic thinking in business schools and corporate boardrooms in the United States Undermining the social foundations of sustainable prosperity it resulted in employment instability income inequity and slow productivity growth In explaining what happened to sustainable prosperity William Lazonick and Jang Sup Shin focus on the growing imbalance between value creation and value extraction in the U S economy and the corporate governance institutions that determine this balance in the nation s major business corporations The imbalance has become so extreme that predatory value extraction is now a central economic activity to the point at which the U S economy as a whole can be aptly described as a value extracting economy Balancing the contributions of economic actors to value creation with their power to extract value provides the foundation for stable and equitable economic growth When certain economic actors are able to assert their

power to extract far more value than they contribute to the value creation process an imbalance occurs which when extreme leads to dire economic political and social consequences This book not only explores these consequences but also sets out an agenda for restoring sustainable prosperity

Capitalizing on New Needs and New Opportunities National Research Council, Policy and Global Affairs, Board on Science, Technology, and Economic Policy, 2001-02-11 This report addresses a topic of recognized policy concern To capture the benefits of substantial U S investments in biomedical R D parallel investments in a wide range of seemingly unrelated disciplines are also required This report summarizes a major conference that reviewed our nation's R D support for biotechnology and information technologies The volume includes newly commissioned research and makes recommendations and findings concerning the important relationship between information technologies and biotechnology It emphasizes the fall off in R D investments needed to sustain the growth of the U S economy and to capitalize on the growing investment in biomedicine It also encourages greater support for inter disciplinary training to support new areas such as bioinformatics and urges more emphasis on and support for multi disciplinary research centers

[Selling Out a Superpower](#) Ronald R. Pollina, 2011-03-08 In 1968 there were sixty two lobbyists in Washington today there are thirty four thousand outnumbering members of Congress and their staffers two to one By 2008 these lobbyists were spending approximately 8 2 million for influence per day Few if any of these lobbyists represent the majority of Americans in the middle class So it's not surprising given these statistics that real median household income in America has stagnated for over a decade This hard

hitting book documents that a combination of special interest groups and their army of money peddling lobbyists along with government mismanagement of business and the economy by both parties have betrayed the American middle and lower classes for the last twenty years The result is a host of misguided laws and policies that have driven jobs and whole industries offshore never to return The author takes issue with those who emphasize the potential benefits of globalization without taking notice of its many negative effects on American society He also argues that inept policy threatens to derail the American economy permanently and that our economic malaise is more than a short term reaction to a financial market collapse or global market forces He cites critical areas where changes must be made to reverse the negative trend Improving our 1950s era educational system to produce a workforce able to compete for 21st century jobs Reform of tax codes that have been driving companies and jobs offshore We are currently a nation that manufactures practically nothing Weaning all levels of government away from deficit spending which drains economic power Pursuing free trade that also means fair trade Ending the cycle of credit card debt and all too easy mortgage credit to finance ultimately unaffordable lifestyles Making the United States more business friendly so companies will grow and provide desperately needed jobs here at home The author warns that unless we implement these and other recommended changes the American economy will inevitably decline while China India and other up and coming nations ascend He maintains that all is not lost If we follow the course he sets we can reinvigorate and renew our economy rebuild America's greatness create 21st century jobs and more This book provides a roadmap for reclaiming American preeminence
