Future Of The Cognitive Revolution:

The Future of the Cognitive Revolution David Martel Johnson, Christina E. Erneling (ed), 1997 The basic idea of the particular way of understanding mental phenomena that has inspired the cognitive revolution is that as a result of certain relatively recent intellectual and technological innovations theorists now possess a more powerfully insightful comparison or model for mind than was available to any thinkers in the past The model in question is that of software or the list of rules for input output and internal transformations by which we determine and control the workings of a computing machine s hardware Although this comparison and its many implications have dominated work in the philosophy psychology and neurobiology of mind since the end of the Second World War it now shows increasing signs of losing its once virtually unquestioned preeminence Thus we now face the question of whether it is possible to repair and save this model by means of relatively inessential tinkering or whether we must reconceive it fundamentally and replace it with something different In this book twenty eight leading scholars from diverse fields of cognitive science linguistics psychology neurophysiology and philosophy present their latest carefully considered judgements about what they think will be the future course of this intellectual movement that in many respects has been a watershed in our contemporary struggles to comprehend that which is crucially significant about human beings Jerome Bruner Noam Chomsky Margaret Boden Ulric Neisser Rom Harré Merlin Donald among others have all written chapters in a non technical style that can be enjoyed and understood by an interdisciplinary audience of psychologists philosophers anthropologists linguists and cognitive scientists alike

The Mind As a Scientific Object Christina E. Erneling, David M. Johnson, 2005-01-13 What holds together the various fields that are supposed to constitute the general intellectual discipline that people now call cognitive science In this book Erneling and Johnson identify two problems with defining this discipline First some theorists identify the common subject matter as the mind but scientists and philosophers have not been able to agree on any single satisfactory answer to the question of what the mind is Second those who speculate about the general characteristics that belong to cognitive science tend to assume that all the particular fields falling under the rubric psychology linguistics biology and so on are of roughly equal value in their ability to shed light on the nature of mind This book argues that all the cognitive science disciplines are not equally able to provide answers to ontological questions about the mind but rather that only neurophysiology and cultural psychology are suited to answer these questions However since the cultural account of mind has long been ignored in favor of the neurophysiological account Erneling and Johnson bring together contributions that focus especially on different versions of the cultural account of the mind

Liya Yu,2022-08-16 Neuroscience research has raised a troubling possibility Could the tendency to stigmatize others be innate Some evidence suggests that the brain is prone to in group and out group classifications with consequences from ordinary blind spots to full scale dehumanization Many are inclined to reject the argument that racism and discrimination could have a cognitive basis Yet if we are all vulnerable to thinking in exclusionary ways if everyone from the most ardent social justice advocates to bigots and xenophobes has mental patterns and structures in common could this shared flaw open new prospects for political rapprochement Liya Yu develops a novel political framework that builds on neuroscientific discoveries to rethink the social contract She argues that our political selves should be understood in terms of our shared social capacities especially our everyday exclusionary tendencies Yu contends that cognitive dehumanization is the most crucial disruptor of cooperation and solidarity and liberal values based discourse is inadequate against it She advances a new neuropolitical language of persuasion that refrains from moralizing or shaming and instead appeals to shared neurobiological vulnerabilities Offering practical strategies to address those we disagree with most strongly Vulnerable Minds provides
