Heldman, 2012-12-06 The approach to teaching the concepts of food processing to the undergraduate food science major has evolved over the past 40 years In most undergraduate food science curricula food processing has been taught on a commodity basis In many programs several courses dealt with processing with emphasis on a different commodity such as fruits and vegetables dairy products meat products and eggs In most situations the emphasis was on the unique characteristics of the commodity and very little emphasis on the common elements associated with processing of the different commodities Quite often the undergraduate student was allowed to select one or two courses from those offered in order to satisfy the minimum standards suggested by the Institute of Food Technologists The current 1FT minimum standards suggest that the undergraduate food science major be required to complete at least one food processing course The description of this course is as follows One course with lecture and laboratory which covers general characteristics of raw food materials principles of food preservation processing factors that influence quality packaging water and waste management and sanitation Prerequisites general chemistry physics and general microbiology *Handbook of Farm, Dairy*

and Food Machinery Engineering Myer Kutz, 2013-06-10 Handbook of Farm Dairy and Food Machinery Engineering is the essential reference for engineers who need to understand those aspects of the food industry from farm machinery to food storage facilities to the machinery that processes and packages our foods. The process of getting food from farm to fork as the saying goes involves more than planting, harvesting, shipping, processing, packaging, and distributing; though those are all key components. Effective and efficient food delivery systems are built around processes that maximize the effort while minimizing cost, time, and resource depletion. This comprehensive reference is for engineers who design and build machinery and processing equipment, shipping containers and packaging, and storage equipment. It includes cutting edge coverage of microwave vacuum application in grain processing, cacao processing, fruit and vegetable processing, ohmic heating of meat, facility design, closures for glass containers, double seaming, and much more. Provides cross topic information for translational research and potential application. Focuses on design and controls written for engineers by engineers, always with practical applications in mind. Includes design of machinery and facilities as well as theoretical basis for determining and predicting behavior of foods as they are handled and processed.
