Food Processing Industry Quality System Guidelines:

Statistical Quality Control for the Food Industry Merton Hubbard, 2013-11-11 Considering the ability of food processing companies to consistently manufacture safe foods with uniform quality over the past 20 or 30 years without these new tools and new systems one might expect that quality control improvements would be marginal. On the other hand these changes have already provided substantial opportunities for process and product improvement. This second edition is intended to update the basic concepts and discuss some of the new ones.

Preface to the First Edition If an automobile tire leaks or an electric light switch fails if we are short changed at a department store or erroneously billed for phone calls not made if a plane departure is delayed due to a mechanical failure these are rather ordinary annoyances which we have come to accept as normal occurrences. Contrast this with failure of a food product. If foreign matter is found in a food if a product is discolored or crushed if illness or discomfort occurs when a food product is eaten the consumer reacts with anger fear and sometimes hysteria. The offending product is often returned to the seller or a disgruntled letter is written to the manufacturer. In an extreme case an expensive law suit may be filed against the company. The reaction is almost as severe if the failure is a difficult to open package or a leaking container. There is no tolerance for failure of food products.

Guide to Quality Management Systems for the Food Industry Ralph Early, 2012-12-06 Whenever I step into an aeroplane I cannot avoid considering the risks associated with flying. Thoughts of mechanical failure pilot error and terrorist action fill my mind. I try to reassure myself with statistics which tell me there is greater chance of injury crossing the road. The moment the plane takes off I am resigned to my fate placing faith in pilots who are highly qualified and superbly trained for the task of delivering me safely to my destination. To be a passenger in an aeroplane is to express faith in the systems used by the airline. It is to express a faith in the quality of the airline's organisation and the people who work within it. The same is true of surgery. Thoughts of mortality are difficult to avoid when facing the surgeon's knife. However faith in the surgeon's training and skill faith in the anaesthetist and theatre technicians faith in the efficient resources and quality of the hospital all help to convince that there is little need to worry. Apart from flying and surgery there are many facets of life which entail risk but knowing the risks we willingly place our confidence in others to deliver us safely. In the consumption of food however few of us consider the risks. Everyday if we are fortunate we eat food. Food sustains and gives us pleasure. Food supports our social interactions.
