González-Domínguez,2020-04-15 Multiple factors can directly influence the chemical composition of foods and consequently their organoleptic nutritional and bioactive properties including their geographical origin the variety or breed as well as the conditions of cultivation breeding and or feeding among others Therefore there is a great interest in the development of accurate robust and high throughput analytical methods to guarantee the authenticity and traceability of foods For these purposes a large number of sensorial physical and chemical approaches can be used which must be normally combined with advanced statistical tools In this vein the aim of the Special Issue Food Authentication Techniques Trends and Emerging Approaches is to gather original research papers and review articles focused on the development and application of analytical techniques and emerging approaches in food authentication This Special Issue comprises 12 valuable scientific contributions including one review article and 11 original research works dealing with the authentication of foods with great commercial value such as olive oil Iberian ham and fruits among others

Food Authentication Contantinos A.

Georgiou,Georgios P. Danezis,2017-02-27 The determination of food authenticity is a vital component of quality control Its importance has been highlighted in recent years by high profile cases in the global supply chain such as the European horsemeat scandal and the Chinese melamine scandal which led to six fatalities and the hospitalisation of thousands of infants As well as being a safety concern authenticity is also a quality criterion for food and food ingredients Consumers and retailers demand that the products they purchase and sell are what they purport to be This book covers the most advanced techniques used for the authentication of a vast number of products around the world The reader will be informed about the latest pertinent analytical techniques Chapters focus on the novel techniques markers that have emerged in recent years An

introductory section presents the concepts of food authentication while the second section examines in detail the analytical techniques for the detection of fraud relating to geographical botanical species and processing origin and production methods of food materials and ingredients Finally the third section looks at consumer attitudes towards food authenticity the application of bioinformatics to this field and the Editor s conclusions and future outlook Beyond being a reference to researchers working in food authentication it will serve as an essential source to analytical scientists interested in the field and food scientists to appreciate analytical approaches This book will be a companion to under and postgraduate students in their wander in food authentication and aims to be useful to researchers in universities and research institutions

Food Protected Designation of Origin, 2013-06-11 Protected designation of origin PDO taken together with other geographical indicators such as protected geographical indication PGI and traditional specialty guaranteed TSG offer the consumer additional guarantees on the quality and authentication of foods They are important tools that protect the names of regional foods such as wines cheeses hams sausages and olives so that

only foods that genuinely originate in a particular region are allowed to be identified as such. The economic value of these regional foods as well as the increased interest from consumers and the food industry about the traceability and origin of food mean that it has become necessary to establish methods for PDO and PGI authentication based on the specific characteristics and chemical markers of these kinds of products. This book offers a complete guide of the methods available to authenticate food PDO beginning with an explanation of the analytical and chemometric methods available for PDO authentication before looking at the main foods covered PGI labels and the social and legal framework for food PGIs. It will be of interest to people engaged in the fields of food production commercialization and consumption as well as policymakers and control laboratories. Offers a complete guide to the methods available for food Protected Designation of Origin PDO authentication. Explains the analytical and chemometric methods. Ethics and the politics of food Matthias Kaiser, Marianne Elisabeth Lien, 2023-08-28 Food has emerged as a political topic par excellence. It is increasingly involved in controversies at a transnational level in relation to issues of access, dominance, trade and control in a shared global environment. At the same time, innovations in biotechnology and animal domestication have brought ethics to the forefront of food debates. Thus we live in an era when the ethics and the politics of food must come together. This book addresses the ethics and the politics of food from a broad range of academic disciplines including sociology, philosophy, nutrition, anthropology, ethics, political science and history. The chapters expose novel problem areas and suggest guidelines for approaching them. Topics range from fundamental issues in philosophy to sustainability, from consumer trust in food to ethical toolkits. Transparency, power and responsibility are key concerns and special attention is given to animal welfare, emerging technologies in food production and marine domestication. Together the chapters represent a wide range of academic responses to the fundamental dilemmas posed by food production and food consumption in the contemporary world.
