xico Pakistan Portugal Serbia Sri Lanka and the United States In recent years the delivery of micronutrients at nanoscale has been widely studied as these systems have the potential to improve bioavailability enable controlled release and enhance stability of food bioactives to a greater extent The nanodelivery systems typically consist of the food bioactive compound encapsulated and stabilized in food grade ingredients such as lipids proteins or polysaccharides with diameters ranging from 10 nm to 1000 nm Among these the lipid based delivery systems such as nanoemulsions solid lipid nanoparticles nanoliposomes and micelles are widely studied for the delivery of lipophilic bioactive compounds These delivery vehicles improve the solubility permeability stability and bioavailability of the lipophilic compounds thereby enhancing their potential for oral delivery and functional food development On the other hand the hydrophilic bioactives are delivered through protein polysaccharide or biopolymer based colloidal nanosystems such as hydrogels nanogels and polymer nanoparticles The major concern other than solubility is the intestinal permeability of the micronutrients For instance the delivery system for compounds with poor intestinal permeability and low solubility need to be carefully designed using suitable lipids and surfactants Offers updated material for undergraduate and postgraduate students in food science biotechnology and related engineering fields Provides a valuable resource of recent scientific progress along with most known applications of nanomaterials in the food industry for researchers engineers and academics Includes novel opportunities and ideas for developing or improving technologies in the food industry

Fermentation based processing advanced with global food systems as humanity started to organize the domestication of agriculture from plant and animal sources These advances emerged across regions of the world from river valley civilizations in Asia Mesopotamia India and China and Africa Egypt to Meso American civilizations As food crops and animal foods emerged from domestication to advancements in post harvest processing stages growth of invisible microbial systems led to modified foods that aligned with local palates of the communities This in several cases became part of food systems as it added a mode of preservation and improved the food quality that was preferred by each community This is how the early genesis of fermented foods from grains fruits and vegetables to animal meats and milk products became an integral part of early civilizations over 4000 years ago and has now carried over and further developed across many countries in every region of the world The foundations of these food fermentations are now an integral part of modern food advances as preferred food substrates and the microbial interactions that drive the metabolic processes in defined food matrixes are being scientifically advanced This book focuses on bringing together diverse emergences and advancements of fermented foods across different regions of the world and how the metabolic processes associated with fermentation in several cases add health relevant functional qualities across different food matrixes This book contains 26 chapters from the Americas Africa Europe and Asia bringing together the fermentation processes of diverse food substrates and their microbial processing and in several cases providing health targeted functional benefits Key Features Discusses the rationale and basis of fermented food systems from across 26 diverse regions of the world with examples from the Americas Asia Europe and Africa Presents historical plant and animal food substrates and the metabolic processes of their fermentation across traditions of a range of countries Covers traditional food fermentations across diverse food substrates that have potentially health relevant functional benefits Reflects and presents the role of historical cultural and traditional food concepts of a diverse range of countries with many novel examples and how they have influenced health relevant functional benefits Discusses the relevance of metabolic concepts of fermented and functional foods in advancing healthy food concepts This book is important for food scientists nutritionists and the health care sector but beyond this it is also relevant for a wider global audience interested in a holistic health approach from food systems where examples of fermentation experience can inform new natural processing strategies to improve food quality and health
