Food Plants Of The Sonoran Desert:

Food Plants of the Sonoran Desert Wendy C. Hodgson, 2001-03 Food Plants of the Sonoran Desert includes not only plants such as gourds and legumes but also unexpected food sources such as palms lilies and cattails all of which have provided nutrition to desert peoples Each species entry lists recorded names and describes indigenous uses which often include nonfood therapeutic and commodity applications The agave for example is cited for its use as food and for alcoholic and nonalcoholic beverages syrup fiber cordage clothing sandals nets blankets lances fire hearths musical instruments hedgerows soap and medicine and for ceremonial purposes The agave entry includes information on harvesting roasting and consumption and on distinguishing between edible and inedible varieties

Food Plants of the Sonoran Desert Wendy C. Hodgson, 2022-02-08 The seemingly inhospitable Sonoran Desert has provided sustenance to indigenous peoples for centuries Although it is to all appearances a land bereft of useful plants fully one fifth of the desert's flora are edible This volume presents information on nearly 540 edible plants used by people of more than fifty traditional cultures of the Sonoran Desert and peripheral areas Drawing on thirty years of research Wendy Hodgson has synthesized the widely scattered literature and added her own experiences to create an exhaustive catalog of desert plants and their many and varied uses Food Plants of the Sonoran Desert includes not only plants such as gourds and legumes but also unexpected food sources such as palms lilies and cattails all of which provided nutrition to desert peoples Each species entry lists recorded names and describes indigenous uses which often include nonfood therapeutic and commodity applications The agave for example is cited for its use as food and for alcoholic and nonalcoholic beverages syrup fiber cordage clothing sandals nets blankets lances fire hearths musical instruments hedgerows soap and medicine and for ceremonial purposes The agave entry includes information on harvesting roasting and consumption and on distinguishing between edible and inedible varieties No other source provides such a vast amount of information on traditional plant uses for this region Written to be easily accessible to general readers the book is an invaluable compendium for anyone interested in the desert's hidden bounty

Food Plant Biogeography of the Sonoran Desert Carolyn Flower, 2019 There is an ongoing debate around the extent that anthropogenic processes influence both plant species distribution dynamics and plant biodiversity patterns Past human food use may leave a strong legacy on not only the extent that food plants are dispersed and fill their potential geographic ranges but also on food plant species richness in areas that have been densely populated by humans through time The persistent legacy of plant domestication on contemporary species composition has been suggested to be significant in some regions However little is known about the effects that past human food use has had on the biogeography of the Sonoran Desert despite its rich cultural diversity and species richness I used a combination of ecoinformatics ethnobotanical and

archaeological data sources to quantitatively assess the impacts of pre Columbian and in some cases more recent human mediated dispersal of food plants on the Sonoran Desert landscape I found that i food plants do fill more of their potential geographic ranges than their un used congeners and that polyploidy growth form and life form are correlated with range filling and past food usage I also found that ii both pre Columbian and contemporary human population presence are correlated with relative food plant species richness Thus both past human food use and contemporary human activities may have influenced the geographic distribution of food plants at regional scales as well as species richness patterns My research emphasizes that there is an interplay between ecological and anthropogenic processes and that therefore humans must be considered as part of the landscape and included in ecological models
