Ahmed, Mohammad Shafiur Rahman, 2012-05-21 In the 21st Century processing food is no longer a simple or straightforward matter. Ongoing advances in manufacturing have placed new demands on the design and methodology of food processes. A highly interdisciplinary science, food process design draws upon the principles of chemical and mechanical engineering, microbiology, chemistry, nutrition, and economics and is of central importance to the food industry. Process design is the core of food engineering and is concerned at its root with taking new concepts in food design and developing them through production and eventual consumption. Handbook of Food Process Design is a major new 2 volume work aimed at food engineers and the wider food industry. Comprising 46 original chapters written by a host of leading international food scientists, engineers, academics, and systems specialists, the book has been developed to be the most comprehensive guide to food process design ever published. Starting from first principles, the book provides a complete account of food process designs including heating and cooling, pasteurization, sterilization, refrigeration, drying, crystallization, extrusion, and separation. Mechanical operations including mixing, agitation, size reduction, extraction, and leaching processes are fully documented. Novel process designs such as irradiation, high pressure processing, ultrasound, ohmic heating, and pulsed UV light are also presented. Food packaging processes are considered, and chapters on food quality, safety, and commercial imperatives portray the role of process design in the broader context of food production and consumption. Handbook of Food Processing, Packaging and Labeling Jerry D'Souza, Jatin Pradhan, 2010 This Handbook creates an understanding of food processing, chemistry, engineering, and technology supported with select relevant case studies. An overview of food preservation and food preservatives is provided in great detail. The applied aspects of food preservation are dealt with. Also, an advanced study of food additives, food irradiation, and food storage is conducted. Focus lies on high pressure food preservation, curing, food dehydrator, fruit preserves, potted meat, food product jugging, drying, freeze drying, refrigeration, and benefits of shaking well. Understanding food packaging and labelling in proper sense is the hallmark of this book. Study of code of hygienic practice for refrigerated packaged foods with extended shelf life in India is an additional input. The European and American guidelines with respect to food borne illness, food safety, and standards are described in detail. Similarly, the regulations, claims, and facts related to food labelling are covered extensively supported with relevant case studies. An overview of global food industry, food marketing, and food quality is discussed briefly. Select case studies related to food administration studies are done at global, regional, and national levels. Necessary food information, food protection, food safety, food inspection, and quality supervision are provided herein supported with select case studies from around the world. India's food processing industry and export worthy food sectors are also analysed. The scope of food processing industry in India, its present status, and future prospects are also dealt with. **Handbook of Research on Food Processing and Preservation Technologies** Monika Sharma, Megh R.
