Food Process Design:

Handbook of Food Process Design, 2 Volume Set Jasim Ahmed, Mohammad Shafiur Rahman, 2012-05-21 In the 21st Century processing food is no longer a simple or straightforward matter Ongoing advances in manufacturing have placed new demands on the design and methodology of food processes A highly interdisciplinary science food process design draws upon the principles of chemical and mechanical engineering microbiology chemistry nutrition and economics and is of central importance to the food industry Process design is the core of food engineering and is concerned at its root with taking new concepts in food design and developing them through production and eventual consumption Handbook of Food Process Design is a major new 2 volume work aimed at food engineers and the wider food industry Comprising 46 original chapters written by a host of leading international food scientists engineers academics and systems specialists the book has been developed to be the most comprehensive guide to food process design ever published Starting from first principles the book provides a complete account of food process designs including heating and cooling pasteurization sterilization refrigeration drying crystallization extrusion and separation Mechanical operations including mixing agitation size reduction extraction and leaching processes are fully documented Novel process designs such as irradiation high pressure processing ultrasound ohmic heating and pulsed UV light are also presented Food packaging processes are considered and chapters on food quality safety and commercial imperatives portray the role process design in the broader context of food production and consumption

Food Plant Design Antonio Lopez-Gomez, Gustavo V. Barbosa-Canovas, 2005-05-06 Although chemical engineering and food technology are subject areas closely related to food processing systems and food plant design coverage of the design of food plants is often sporadic and inadequately addressed in food technology and engineering books Some books have attempted to treat food engineering from this dual point of view but most have not achieved balanced coverage of the two Focusing on food processing rather than chemical plants Food Plant Design presents precise design details with photos and drawings of different types of food processing plants including food processing systems refrigeration and steam systems conveying systems and buildings The authors discuss the subject in an ordered format that gives you the tools to produce food products with minimum cost Including modeling procedures for food processing systems and auxiliary systems they elucidate synthesis techniques and procedures Using a clear structure for different levels of information and data on different food processing alternatives the book outlines solutions to plant design problems in the context of overall optimization of an agro industrial system and corresponding food chain It provides the work procedures and techniques for solving the design problems of a food processing plant and in making a defined food product

Food Process Design Zacharias B. Maroulis, George D. Saravacos, 2003-05-09 This timely reference utilizes simplified computer strategies to analyze develop and optimize industrial food processes and offers procedures to assess various operating conditions engineering and economic relationships and the physical and transport properties of foods for the design of the most efficient

food manufacturing technologies and equipment Food Process Design discusses the integration and economic profitability of the entire food processing plant including effective use of water energy and raw materials process profitability and wastewater reduction The book offers detailed numerical examples for major food processes including heating cooling freezing and more

Food Process Design and Evaluation RakeshK. Singh, 2017 This new book provides detailed illustrated reports on important recent advances in processing of foods including separation mixing preservation and extrusion The authors are specialists in food processing from North America and Europe The reports were originally presented at the Conference of Food Engineering sponsored by the American Institute of Chemical Engineers in 1992 and 1993 they were selected rewritten and updated for this book Provided by publisher

Handbook of Food Process Design Jasim Ahmed, Shafiur Rahman, This book will offer a comprehensive account of the design of all major food processing systems including both established and novel unit operations The range of equipment available for any given process will be described including the basic theoretical principles and modes of operation Advantages and limitations of the equipment within various relevant parameters such as size processing time cost and energy requirements will be explained and schematic diagrams will be provided to show the stages of each process component in detail The book also covers computer aided design and control systems cost considerations and cleaning and sanitation methods Practical examples of process design scenarios will be included to help the reader in specifying and designing their own operations All chapters will follow the following format

- 1 Purpose of unit operation
- 2 What are the end products of the process
- 3 Process flow sheet material and energy balances and schematic diagram of the process and its components
- 4 Basic theoretical principles and mode of operations
- 5 Different types of equipment available with their advantages and limitations What are the parameters we need to know For example time energy size and other factors
- 6 Empirical data and rules of thumb used to facilitate the various design calculations simplified equations and shortcut methods
- 7 Simple equations tables and graphs to estimate the design parameters
- 8 Process control operations and maintenance of the unit operations
- 9 Advanced levels of process design for complicated systems Computer aided process plant design
- 10 Cleaning and sanitation methods
- 11 Capital and operating cost for different size of the equipments
- 12 Summary and future needs
- 13 Worked out examples related to design

Introduction to Food Process Engineering P. G. Smith, 2003 This is a work on food process engineering which treats the principles of processing in a scientifically rigorous yet concise manner and which may be used as a lead in to more specialized texts for higher study It is equally relevant to those in the food industry who desire a greater understanding of the principles of the food processes with which they work

Handbook of Food Processing Equipment George Saravacos, Athanasios E. Kostaropoulos, 2015-12-29 This text covers the design of food processing equipment based on key unit operations such as heating cooling and drying In addition mechanical processing operations such as separations transport storage and packaging of food materials as well as an introduction to food processes and food processing plants are

discussed Handbook of Food Processing Equipment is an essential reference for food engineers and food technologists working in the food process industries as well as for designers of process plants The book also serves as a basic reference for food process engineering students The chapters cover engineering and economic issues for all important steps in food processing This research is based on the physical properties of food the analytical expressions of transport phenomena and the description of typical equipment used in food processing Illustrations that explain the structure and operation of industrial food processing equipment are presented style font size 13 3333330154419px The materials of construction and fabrication of food processing equipment are covered here as well as the selection of the appropriate equipment for various food processing operations Mechanical processing equipment such as size reduction size enlargement homogenization and mixing are discussed Mechanical separations equipment such as filters centrifuges presses and solids air systems plus equipment for industrial food processing such as heat transfer evaporation dehydration refrigeration freezing thermal processing and dehydration are presented Equipment for novel food processes such as high pressure processing are discussed The appendices include conversion of units selected thermophysical properties plant utilities and an extensive list of manufacturers and suppliers of food equipment

Food Process Engineering Operations George D. Saravacos, Zacharias B. Maroulis, 2011-02-22 A unique and interdisciplinary field food processing must meet basic process engineering considerations such as material and energy balances as well as the more specialized requirements of food acceptance human nutrition and food safety Food engineering therefore is a field of major concern to university departments of food science and chem

Handbook of Food Factory Design Christopher G. J. Baker, 2013-08-27 Food manufacturing has evolved over the centuries from kitchen industries to modern sophisticated production operations A typical food factory includes the food processing and packaging lines the buildings and exterior landscaping and the utility supply and waste treatment facilities As a single individual is unlikely to possess all the necessary skills required to facilitate the design the task will undoubtedly be undertaken by an interdisciplinary team employing a holistic approach based on a knowledge of the natural and biological sciences most engineering disciplines and relevant legislation In addition every successful project requires a competent project manager to ensure that all tasks are completed on time and within budget This Handbook attempts to compress comprehensive up to date coverage of these areas into a single volume It is hoped that it will prove to be of value across the food manufacturing community The multi disciplinary nature of the subject matter should facilitate more informed communication between individual specialists on the team It should also provide useful background information on food factory design for a wider range of professionals with a more peripheral interest in the subject for example process plant suppliers contractors HSE specialists retailers consultants and financial institutions Finally it is hoped that it will also prove to be a valuable reference for students and instructors in the areas of food technology chemical engineering and mechanical engineering in particular
