Routledge Handbook of Food as a Commons Jose Luis Vivero-Pol,Tomaso Ferrando,Olivier De Schutter,Ugo Mattei,2018-12-17 From the scientific and industrial revolution to the present day food an essential element of life has been progressively transformed into a private transnational mono dimensional commodity of mass consumption for a global market But over the last decade there has been an increased recognition that this can be challenged and reconceptualized if food is regarded and enacted as a commons This Handbook provides the first comprehensive review and synthesis of knowledge and new thinking on how food and food systems can be thought interpreted and practiced around the old new paradigms of commons and commoning The overall aim is to investigate the multiple constraints that occur within and sustain the dominant food and nutrition regime and to explore how it can change when different elements of the current food systems are explored and re imagined from a commons perspective Chapters do not define the notion of commons but engage with different schools of thought the economic approach based on rivalry and excludability the political approach recognizing the plurality of social constructions and incorporating epistemologies from the South the legal approach that describes three types of proprietary regimes private public and collective and different layers of entitlement bundles of rights and the radical activist approach that considers the commons as the most subversive coherent and history rooted alternative to the dominant neoliberal narrative These schools have different and rather diverging epistemologies vocabularies ideological stances and policy proposals to deal with the construction of food systems their governance the distributive implications and the socio ecological impact on Nature and Society The book sparks the debate on food as a commons between and within disciplines with particular attention to spaces of resistance food sovereignty de growth open knowledge transition town occupations bottom up social innovations and organizational scales local food national policies South South collaborations international governance and multi national agreements Overall it shows the consequences of a shift to the alternative paradigm of food as a commons in terms of food the planet and living beings *Feeding the People in Wartime Britain* Bryce Evans,2022-04-07

While the history of food on the home front in wartime Britain has mostly focused on rationing this book reveals the importance and scale of nation wide communal dining schemes during this era Welcomed by some as a symbol of a progressive future in which wasteful home dining would disappear and derided by others for threatening the social order these sites of food and eating attracted great political and cultural debate Using extensive primary source material *Feeding the People in Wartime Britain* examines the cuisine served in these communal restaurants and the people who used them It challenges the notion that communal eating played a marginal role in wartime food policy and reveals the impact they had in advancing nutritional understanding and new food technologies Comparing them to similar ventures in mainland Europe and understanding the role of propaganda from the Ministry of Food in their success Evans unearths this neglected history of

emergency public feeding and relates it to contemporary debates around food policy in times of crisis **Algae as a Natural Solution for Challenges in Water-Food-Energy Nexus** Tonni Agustiono Kurniawan, Abdelkader

Anouzla, 2024-07-13 This book provides an overview of challenges and opportunities for algal management to mitigate climate change This book offers new perspectives on how to control water pollution due to algae while converting it to biosorbent and biodiesel that could be sold in market The work also explores how to improve the performance of algae for such purposes By identifying existing knowledge gap this work uncovers new research directions for further development of algal management to address global environmental pollution Extensive literature survey 2001 2023 in algal management based on empirical approach in the body of knowledge A comprehensive overview with critical analysis of algal management for water treatment biodiesel production and food production while dealing with climate change Providing insights about challenges research direction outlook and perspectives of algal management in Industry 4 0 era This book has an advantage that each chapter will be written by experts around the world working in their respective fields As a result this volume presents a balanced picture across the whole spectrum of algae Furthermore the authors are from both the developing and developed countries thus giving a worldwide perspective of looming climatic problems *Proteins, Pathologies and Politics*

David Gentilcore, Matthew Smith, 2018-12-13 *Proteins Pathologies and Politics* presents an international and historical approach to dietary change and health contrasting current concerns with how issues such as diabetes cancer vitamins sugar and fat and food allergies were perceived in the 19th and 20th centuries Though what we eat and what we shouldn't eat has become a topic of increased scrutiny in the current century the link between dietary innovation and health disease is not a new one From new fads in foodstuffs through developments in manufacturing and production processes to the inclusion of additives and evolving agricultural practices changing diet changes often promised better health only to become associated with the opposite With contributors including Peter Scholliers Francesco Buscemi Clare Gordon Bettencourt and Kirsten Gardner this collection comprises the best scholarship on how we have perceived diet to affect health The chapters consider the politics and economics of dietary change the historical actors involved in dietary innovation and the responses to it the extent that our dietary health itself a cultural construct or even a product of history This is a fascinating and varied study of how our diets have been shaped and influenced by perceptions of health and will be of great value to students of history food history nutrition science politics and sociology A Resource Guide for Nutrition Management Programs for Older Persons
