**Tropical Ecosystems: Structure, Functions and Challenges in the Face of Global Change** Satish Chandra Garkoti, Skip J. Van Bloem, Peter Z. Fulé, Rajeev L. Semwal, 2019-09-24 The book brings together research topics having a broad focus on human and climate change impacts on the terrestrial ecosystems in the tropics in general and more specifically from the most significant and vulnerable Himalayan ecosystem A total of 16 contributions included in the book cover a diverse range of global change themes such as the impacts of changing

temperature and precipitation on soil ecosystems forest degradation extent and impacts of invasive species plant responses to pollution climate change impacts on biodiversity and tree phenology environmental changes associated with land use importance of traditional knowledge in climate change adaptation timberline ecosystems and role of integrated landscape modeling for sustainable management of natural resources The book is a collective endeavour of an international multidisciplinary group of scientists focused on improving our understanding of the impacts of global change on the structure and functioning of tropical ecosystems and addressing the challenges of their future sustainable management We hope that the book will help researchers working in the areas of ecology and environmental science to update their knowledge We also expect that natural resource managers and policy planners will find explanations for some of their observations and hypotheses on multiple global change factors impacting tropical ecosystems and especially Himalayan ecosystems

*How Overfishing Handicaps Resilience of Marine Resources Under Climate Change* Maria Lourdes D. Palomares, Rashid Sumaila, Charlotte De Fontaubert, 2024-11-26

Life Below Water LBW is in decline partly due to overfishing and partly because climate change is disrupting the biophysics of the ocean Fish is a central part of LBW where predator prey relationships keep the ocean alive An ocean full of life is an important source of food and livelihoods for humans worldwide LBW is now facing two ominous threats overfishing and climate change In this Research Topic we address how the reduction of overfishing can increase the ability of LBW to withstand the impacts of climate change Thus we encourage the submission of contributions that relate the fishing down marine food webs phenomenon i e the truncation of marine food webs by the extraction of high trophic level species the destruction of marine habitats e g through harmful fishing gears and the continued unsustainable extraction of these resources with climate related impacts on marine environments species populations and ecosystems We particularly encourage papers that discuss mitigation of climate change and the positive effect that this will have to make LBW resilient We would like to encourage an active discussion of future actions and policies to support this mitigation and provide the elements that might help in building a multidimensional and interactive framework to build LBW resilience
