**Environmental Sustainability** Ebenezer O. Aka, 2017-04-26 The book examines the issues of sustainability in general. It addresses various socioeconomic determinants of ecological footprints in different world's nations, regions, and cultures. Major socioeconomic determinants of ecological footprints are fleshed out using Comparative Model Analysis and rigorous Multiple Regression Analysis. The study exposes the inequitable distribution of the world's ecological footprints and also heightens the concern about ecological imbalances and overshoots. It explains how sustainable development can be promoted and achieved in regional, national, and local jurisdictions. The study provides information that will likely help various governments and policy makers determine if a given nation, region, or culture is on a sustainable path. It helps government leaders, planners, policy makers, and even students of sustainability make a difference in mitigating the effects of various environmental stressors. If this book makes people and policy makers in different countries, regions, and cultures think globally but act locally, then the objectives are well served.

### **Water for Food Security and Well-being in Latin America and the Caribbean**

Bárbara A. Willaarts, Alberto Garrido, M. Ramón Llamas, 2014-04-24 This volume provides an analytical and facts-based overview on the progress achieved in water security in Latin America and the Caribbean (LAC) region over the last decade and its links to regional development, food security, and human well-being. Although the book takes a regional approach covering a vast amount of data pertaining to most of the LAC region, some chapters focus on seven countries: Argentina, Brazil, Chile, Colombia, Costa Rica, Mexico, and Peru. A full understanding of LAC's trends and progress requires framing this region in the global context, an ever more globalized world where LAC has an increasing geopolitical power and a growing presence in international food markets. The book's specific objectives are: 1) exploring the improvements and links between water and food security in LAC countries; 2) assessing the role of the socio-economic megatrends in LAC, identifying feedback processes between the region's observed pattern of changes regarding key biophysical, economic, and social variables linked to water and food security; and 3) reviewing the critical changes that are taking place in the institutional and governance water spheres, including the role of civil society, which may represent a promising means to advancing towards the goal of improving water security in LAC. The resulting picture shows a region where recent socioeconomic development has led to important advances in the domains of food and water security. Economic growth in LAC and its increasingly important role in international trade are intense in terms of use of natural resources such as land, water, and energy. This poses new and important challenges for sustainable development. The reinforcement of national and global governance schemes and their alignment on the improvement of human well-being is and will remain an inescapable prerequisite to the achievement of long-lasting security. Supporting this bold idea with facts and science-based conclusions is the ultimate goal of the book.

the adoption of best climate smart practices and efficient water management in the banana value chain as part of the environmental strategy of organizations Efforts to promote CWF reduction programs in the banana industry are still incipient and carried out mostly by multinationals due in part to the implementation costs the complexity of the topic for farmers the lack of user friendly tools to measure them efficiently and that is still a B2B driven strategy not yet recognized by consumers Even though the need for supporting carbon and water footprint analysis CWF in the banana industry remains strong there is still an apparent lack of sufficient financial incentives by both the governments and the global market
