Environmental Conservation Clement Allan Tisdell, 2005-01-01 Tisdell has produced one of the best books in print about the economics of environmental conservation This volume updates the 1991 edition by discussing more current issues theories developments and analytic frameworks Tisdell masterfully weaves into many chapters insights from ecological economics a somewhat new area of economics that cannot be ignored in informed discussions of environmental conservation Tisdell writes clearly and documents each chapter extremely well He presents a quite balanced view on policy issues discussing pros and cons of different policies Overall an extraordinary book Essential Academic collections upper division undergraduate and up D D Miller Choice I like it alot and would certainly recommend it to students as an excellent entry point into environmental economics It is certainly comprehensive covering international through to local environmental issues developed and developing country experiences across both green and brown topics The book is written in a highly accessible style and embodies a rigorous theoretical base on which is developed a host of practical examples of application This reflects Tisdell s wide ranging experience as one of the senior statesmen of environmental economics Jeff Bennett The Australian National University A second edition of this book is to be warmly welcomed The insights it offers into the sustainable use of ecological resources especially in developing countries are important for those coming to the study of environmental resource or ecological economics for the first time While the treatment of new topics such as globalization and the Environmental Kuznets Curve adds value to the original text the inclusion of much material from the first edition helps remind us that there is a rich and long standing literature on this topic Charles Perrings University of York UK In the second edition of Economics of Environmental Conservation Clem Tisdell applies wisdom experience and carefully developed economic theory to dozens of conservation issues The result is a wide ranging book that skillfully employs ecological economics to analyse conservation issues drawn often from Australia and Asia and relevant in many countries The policy options proposed to the diverse conservation issues reflect a philosophy developed during more than thirty years research The book is a rich source of insight and inspiration for anyone analysing environmental conservation issues Ross Cullen Lincoln University New Zealand Few economists have the breadth of experience and depth of analytical capability to comment with insight on the vast array of issues that now comprise the environmental agenda Clem Tisdell is one of that

small band Here is a welcome expansion of his already successful Economics of Environmental Conservation Highly recommended David Pearce University College London UK This fully updated and comprehensively revised edition of a classic text concentrates on the economics of conserving the living environment It begins by covering the ethical foundations and basic economic paradigms essential for understanding and assessing ecological economics General strategies for global environmental conservation policies for government intervention developing countries preserving wildlife and biodiversity open access to and common property in natural resources conservation of natural areas forestry agriculture and the environment tourism sustainable development and demographic change are also all covered This second edition deals with contemporary environmental policy issues that can be expected to be of lasting concern and importance each chapter benefiting from either the addition of substantial sections of new material valuable explanations or updates and revisions in light of developments in theory or world events and conditions Updated techniques of economic analysis are also introduced explained simply and a

Biodiversity Economics Andreas Kontoleon, Unai Pascual, Timothy Swanson, 2007-12-13 Human induced biodiversity loss is greater now than at any time in human history with extinctions occurring at rates hundreds of times higher than background extinction levels The field of biodiversity economics analyses the socio economic causes of and solutions to biodiversity loss by combining the disciplines of economics ecology and biology This field has shown a remarkable degree of transformation over the past four decades and now incorporates the analysis of the entire diversity of biological resources within the living world Biodiversity Economics presents a series of papers that show how bio economic analysis can be applied to the examination and evaluation of the problem of various forms of biodiversity loss Containing insightful bio economic research by some of prominent practitioners in the field this volume will be an essential research tool to those working on biodiversity issues in the academic policy and private sectors *Tradeoffs Or Synergies?* David R. Lee, Christopher B. Barrett, 2000-11-22 The need to increase food production enhance economic growth and reduce poverty in an environmentally sustainable context is an issue of growing importance This book addresses the linkages and tradeoffs involved in solving such key challenges Guide to Sustainable Development and Environmental Policy William L. Ascher, Natalia Mirovitskaya, 2002-03-29 A compilation of definitions terms and critical commentary on aspects of sustainable development and environmental policy with a strong emphasis on policy tools policy practices and systems of international environmental governance

The Environment and Development in Africa Moses K. Tesi, 2000-01-01 The premise of The Environment and Development in Africa is that current environmental problems in sub Saharan Africa are an outcome of the continent s development activities Whether these activities have generated economic growth and raised living standards or have led to growth without overall increases in living standards or have even contributed to a decline in people s well being developments in that region have produced effects that have degraded Africa s environment in many ways This book presents a comprehensive and systematic analysis of the context of the environmental issues facing sub Saharan African

states Contributors discuss the problems associated with generating the capacity to manage Africa's environmental concerns assess the impact of economic development efforts on the region's environment and examine various societal and policy responses to environmental problems and to development problems linked to ecological decay This is an important book for scholars and policy advisors concerned with African studies and global environmental issues *The Virtues of Ignorance* Bill Vitek, Wes Jackson, 2008-05-01 Human dependence on technology has increased exponentially over the past several centuries and so too has the notion that we can fix environmental problems with scientific applications The Virtues of Ignorance Complexity Sustainability and the Limits of Knowledge proposes an alternative to this hubristic shortsighted and dangerous worldview The contributors argue that uncritical faith in scientific knowledge has created many of the problems now threatening the planet and that our wholesale reliance on scientific progress is both untenable and myopic Bill Vitek Wes Jackson and a diverse group of thinkers including Wendell Berry Anna Peterson and Robert Root Bernstein offer profound arguments for the advantages of an ignorance based worldview Their essays explore this philosophy from numerous perspectives including its origins its essence and how its implementation can preserve vital natural resources for posterity All conclude that we must simply accept the proposition that our ignorance far exceeds our knowledge and always will Rejecting the belief that science and technology are benignly at the service of society the authors argue that recognizing ignorance might be the only path to reliable knowledge They also uncover an interesting paradox knowledge and insight accumulate fastest in the minds of those who hold an ignorance based worldview for by examining the alternatives to a technology based culture they expand their imaginations Demonstrating that knowledge based worldviews are more dangerous than useful The Virtues of Ignorance looks closely at the relationship between the land and the future generations who will depend on it The authors argue that we can never improve upon nature but that we can by putting this new perspective to work in our professional and personal lives live sustainably on Earth Evaluation and Assessment for Conservation Ian Spellerberg, 2013-11-11 Most politicians have jumped on the conservation bandwagon and nobody running for public office these days can afford to take an overtly anti environment stand The fascination that children have for nature the generous donations people make to conservation organizations the votes cast for Green Parties the continuing popularity of zoos and wildlife films and the strong sales of books about the environment all provide evidence to politicians that the general public supports the idea of conservation Conservation has become a major issue for governments No longer is it necessary for conservationists to campaign for getting the cause on the agenda it is already there at least as a talking point The issue now is how to convert this generalized interest into real action And among the many priorities competing for attention how is a government or a private organization to decide what to do first From a very limited budget for budgets will always be limited what is the package of activities that is most likely to lead to the results that the public wants Ian Spellerberg attempts to address these questions which are at the heart of modern conservation action It is relatively easy to prescribe

useful activities that will benefit both the environment and the public at large

The World Environment 1972-1992 O. El-Kholy, 2012-12-06 Our planet is under siege Assaults on the atmosphere the greenhouse effect the depletion of the ozone layer and increasing air pollution pose a still unquantified threat to human life The dumping of hazardous wastes and land based sources of pollution present a similar threat to the oceans On land we are destroying a tropical forest the size of Austria every year and more than a hundred species of wild plants and animals are lost forever each day When the General Assembly of the United Nations established UNEP it charged us with reporting on the changing state of the world s environment tracking the underlying causes of change and working with governments to develop responses to those changes Every year since 1974 UNEP has produced a State of the Environment report focusing on one or more emerging environmental issues and always stressing the human factor the impact of environmental quality on people and society Three times since its inception 1982 1987 and 1992 UNEP has undertaken a more wide ranging study The results of the present study are the most disturbing of the three However not all the signs are negative Throughout the 1970s and into the 1980s UNEP was able to report progress in some important areas Environmental monitoring capacity was being rapidly improved in many parts of the world and Ministries of the Environment were being set up in an attempt to deal with environmental threats in a more coherent way

Living in a Dynamic Tropical Forest Landscape Nigel Stork, Stephen M. Turton, 2009-01-26 This book brings together a wealth of scientific findings and ecological knowledge to survey what we have learned about the Wet Tropics rainforests of North Queensland Australia This interdisciplinary text is the first book to provide such a holistic view of any tropical forest environment including the social and economic dimensions The most thorough assessment of a tropical forest landscape to date Explores significant scientific breakthroughs in areas including conservation genetics vegetation modeling agroforestry and revegetation techniques biodiversity assessment and modeling impacts of climate change and the integration of science in natural resource management Research achieved in part due to the Cooperative Research Centre for Tropical Rainforest Ecology and Management the Rainforest CRC Written by a number of distinguished international experts contains chapter summaries and section commentaries

Ecological Policy and Politics in Developing Countries Uday Desai, 1998-04-16 Examines in depth the ecological problems policies and politics of ten major developing countries

Land Degradation A.J. Conacher, 2013-12-11 This book contains selected contributions from the Sixth Meeting of the International Geographical Union s Commission on Land Degradation and Desertification held in Perth Australia in September 1999 Collectively these contributions explicitly seek to understand not only the mechanisms responsible for the problem of land degradation but their social and economic implications the means of overcoming the problems and the policy instruments whereby remedial measures may be implemented This breadth of approach is both distinctive and essential if the problems are to be tackled effectively The authorship comprises of specialists mostly geographers from universities research organizations and government agencies who provide a truly international perspective

with contributions from Iceland to Australia and from the USA to Japan Audience The book presents current research findings which will be of particular benefit to professionals and practitioners as well as researchers and tertiary level educationalists who are involved with land degradation Plant Genetic Conservation Nigel Maxted, B.V. Ford-Lloyd, J.G. Hawkes, 2013-12-01 The recent development of ideas on biodiversity conservation was already being considered almost three quarters of a century ago for crop plants and the wild species related to them by the Russian geneticist N Vavilov He was undoubtedly the first scientist to understand the importance for humankind of conserving for utilization the genetic diversity of our ancient crop plants and their wild relatives from their centres of diversity His collections showed various traits of adaptation to environmental extremes and biotypes of crop diseases and pests which were unknown to most plant breeders in the first quarter of the twentieth century Later in the 1940s 1960s scientists began to realize that the pool of genetic diversity known to Vavilov and his colleagues was beginning to disappear Through the replacement of the old primitive and highly diverse land races by uniform modern varieties created by plant breeders the crop gene pool was being eroded The genetic diversity of wild species was equally being threatened by human activities over exploitation habitat destruction or fragmentation competition resulting from the introduction of alien species or varieties changes and intensification of land use environmental pollution and possible climate change *Invasive Species and Biodiversity Management* Odd Terje Sandlund, Peter Johan Schei, Åslaug Viken, 2001-06-30 Based on a selection of papers presented at the Norway UN Conference on Alien Species Trondheim Norway *Economics, Ecology, and the Roots of Western Faith* Robert R. Gottfried, 1995-09-06 Environmentalists have turned to Eastern religion Deep Ecology and Native American religion for alternatives to the Western view that humans should dominate nature In *Economics Ecology and the Roots of Western Faith* Robert R Gottfried persuasively demonstrates that the ancient Hebrew worldview found in the Torah and the New Testament is remarkably green Drawing on these insights from ancient Western thought and economic understanding of ecosystems and natural processes Gottfried analyzes the prerequisites for maintaining or improving human welfare and ecological vitality in terms of land economics and management **Community Participation in Conservation of Great Himalayan National Park, India** Suman Bhanoo, The book has relevance to academics scholars administrators policy experts anthropologists sociologists development scientists environmentalists as well as anyone interested in the welfare of communities residing in the vicinity of a Protected Area It stands out as a work that will stand the test of time and should be an asset that many would like to keep Dr Abhik Ghosh Professor and Chairperson Department of Anthropology Panjab University Chandigarh This book is an excellent compilation of the outcome of the intense research work undertaken in the emerging field of Community Based Ecotourism Management at The UNESCO World Heritage Site The Great Himalayan National Park and it will certainly be useful to provide necessary information future research road map and guidelines for all the stakeholders for effective planning and implementation of sustainable ecotourism Ajay Srivastav Faculty Wildlife Institute of India Dehradun Former

Director Great Himalayan National Park Social Change and Conservation Krishna B. Ghimire, Michael P. Pimbert, 2013-11-05 The book discusses protected areas and conservation policies critically reviewing protected areas management and the concepts of conservation Drawing on case studies from North America Europe Asia and Africa it shows how they affected local people their customary rights livelihoods well being and social cohesion The book argues for an overhaul of conservation thinking and practice **Cost-benefit Analysis** James H. Meisel, K. Puttaswamaiah, 2020-10-11 The world is increasingly concerned with bridging the developmental gap between the developed and developing countries With the establishment of a number of institutions for funding the projects including the World Bank Asian Development Bank and many other agencies the need to develop mechanisms to assess economically viable projects is more important than ever The Social Cost Benefit Analysis SCBA is an important technique used in formulating appraising and evaluating projects It is a facet of applied welfare economics which is increasingly being used to identify and assess public projects in both developing and developed countries This volume presents a comprehensive view of cost benefit analysis in its theoretical and applied dimensions Both theory and case studies are presented The theoretical setting for Cost Benefit Analysis is established by the first five chapters Spatial General Equilibrium and Cost Benefit Analysis by David M Newbery Optimum Growth Theory and Social Time Preference A Computerized Mathematical Modeling Exercise to Choose a Social Discount Rate by Sardar M N Islam A Theoretical Inquiry of the Axiomatic Consistency of Distributional Weights used in Cost Benefit Analysis by Giuseppe Munda The Output Gap Measurement Related Concepts and Policy Implications by Parameswar Nandakumar and A Methodological Comparison of Theoretical Approaches in Dichotomous Choice Contingent Valuation by John C Whitehead This book will be useful as a reference text by professors and students in project appraisal classes and will be of equal value to analysts planners and interested general readers **Biodiversity and Traditional Knowledge** Sarah A. Laird, 2010-09-23 Biodiversity research and prospecting are long standing activities taking place in a new legal and ethical environment Following entry into force of the Convention on Biological Diversity in 1993 and other recent policy developments expectations and obligations for research and prospecting partnerships have changed However to date there are few guides to integrating these concepts with practice This book offers practical guidance on how to arrive at equitable biodiversity research and prospecting partnerships Drawing on experience and lessons learned from around the world it provides case studies analysis and recommendations in a range of areas that together form a new framework for creating equity in these partnerships They include researcher codes of ethics institutional policies community research agreements the design of more effective commercial partnerships and biodiversity prospecting contracts the drafting and implementation of national access and benefit sharing laws and institutional tools for the distribution of financial benefits As part of the People and Plants initiative to enhance the role of communities in efforts to conserve biodiversity and use natural resources sustainably Biodiversity and Traditional Knowledge will be invaluable to students researchers and local communities
