Economics Of Advanced Manufacturing Systems:

Economics of Advanced Manufacturing Systems Hamid R. Parsaei,A. Mital,2012-12-06 The 1980s have witnessed a tremendous growth in the field of computer integrated manufacturing systems The other major areas of development have been computer aided design computer aided manufacturing industrial robotics automated assembly cellular and modular material handling computer networking and office automation to name just a few These new technologies are generally capital intensive and do not conform to traditional cost structures The net result is a tremendous change in the way costs should be estimated and economic analyses performed The majority of existing engineering economy texts still profess application of traditional analysis methods But as was men tioned above it is clear that the basic trend in manufacturing industries is itself changing So it is quite obvious that the practice of traditional economic analysis methods should change too This book is an attempt to address the various issues associated with non traditional methods for evaluation of advanced computer integrated technologies This volume consists of twenty refereed articles which are grouped into five parts Part one Economic Justification Methods consists of six articles In the first paper Soni et al present a new classification for economic justification methods for advanced automated manufacturing systems In the second Henghold and LeClair look at strengths and weaknesses of expert systems in general and more specifically an application aimed at investment justification in advanced technology The third paper by Carrasco and Lee proposes an enhanced economic methodology to improve the needs analysis conceptual design and detailed design activities associated with technology modernization *Economic and Multiattribute Evaluation of Advanced Manufacturing Systems* John R. Sullivan,T.R. Hanley,2013-10-22 Competence in investment analysis is now a basic requirement for most practicing managers engineers and financial analysts in order to avoid possible serious mistakes arising from flawed or inadequate knowledge of the discipline Furthermore individuals who make decisions based on technical economics stake their professional futures in many cases on the accuracy of such evaluations The aim of this volume is to provide a balanced view of the essential components of economic and financial analysis including 1 Strategic and design issues 2 Principles of cost management systems and activity based costing and 3 Tools for developing the financial measures of investment worth with advanced topics and case studies in these three areas This volume provides a refreshing insight into the various methods that engineers managers and financial analysts may need to consider to find good alternatives for the investment of scarce resources Not only are new ventures presented but also improvements within existing facilities that include process modification product design equipment replacement and plant expansion contraction **An Economic Evaluation Model for Advanced Manufacturing Systems** Young-Kyu Son,1987 **Economic Evaluation of Advance Technologies** Jerome P.
