Cohen, 2003 A book and course that teaches you the Natural Systems Thinking Process A nature connected learning tool enables our psyche to genuinely tap the healing powers of nature and regenerate 48 peaceful natural intelligences in our awareness and thinking Backyard or backcountry this practical multiple sense book empowers you to improve your health relationships and happiness by replacing destructive omissions in how we learn to think with rejuvenated natural sensitivities Learn how to reconnect your psyche to its nurturing origins in the restorative vigor sustainability and peace of nature Help yourself and your community benefit from the profound renewal that lies in the magnificence of a beautiful day the wisdom of an ancient tree and the fortitude of a weed Let nature's invincible healing energies help your thinking transform your stress disorders and harmful bonds into constructive personal social and environmental rewards Grow from hands on accredited Applied Biophilia classes essays activities research internships ethics counseling and healing Strengthen your inborn natural genius Enjoy an Earth friendly job career internship or teaching certification Take advantage of subsidized online courses and degree programs To understand how and why this book will work for you as it has for so many others consider the following key intelligence test question one that ordinarily might help assess a person's mathematical aptitude If you count a dog's tail as one of its legs how many legs does a dog have Five of

course is the correct answer for a math test Intelligent people say five because it is valid in mathematical systems and contemporary thinking and is highly regarded and rewarded by our society However we don't solely live our lives or think in mathematical systems Our natural sense of reason can consider what we know from our actual contact with a real normal dog too That's when our multitude of other natural senses come into play senses of touch motion color texture language sound smell consciousness community trust contrast and love They each provide further information and help our sense of reason make more sense and a more informed decision They enable our thinking to register that a tail is different than a leg that a dog has four legs not five no matter what might be correct in mathematical logic It is a grave mistake for anyone not to take seriously the difference between 4 leg and 5 leg ways of knowing and our learned prejudice for the latter As this book shows when they are not in balance the schism between their two different ways of registering the world is significant Four leg knowing is a magnificent psychological and physiological phenomenon with deep natural system roots into the eons the heart of Earth and our psyche It brings our widely diverse multiplicity of natural sensory experiences into our awareness Five leg knowing produces important awareness through abstract imagination labels and stories However when it does not also seek and contain 4 leg knowledge it results not only in our desensitization but in the separation of our thinking from the regenerative powers of Earth's natural systems within and around us This profound loss produces the many destructive side effects of our artificial world that we can not readily solve Four leg versus 5 leg discord creates an entrenched conflict in our psyche between how we think and how nature works This is a point source of the stress and contamination our society produces in the integrity of people and the environment It generates our many disorders and troubles that are seldom found in nature It is important to recognize is that by financially and socially rewarding us for getting good grades or for making the grade by using nature isolated 5 leg thinking our socialization habitually bonds conditions programs or ad

other hand the natural environment can also be a healer Research shows that hospital stays are shortened and the need for pain medication reduced for patients exposed to nature even in images or to the company of animals Nursing home patients live longer if allowed to keep pets and one controlled study shows that caring for animals reduces disruptive behavior in even the most difficult ADD children This book offers the first overview of the many ways the environment can affect mental health and illness It will prove to be an important and valuable resource for physicians in psychiatry public health and environmental medicine for clinical and counseling psychologists and social workers and for environmental researchers and advocates worldwide
