Mathematical Methods in Linguistics Barbara B.H. Partee, A.G. ter Meulen, R. Wall, 2012-12-06 Elementary set theory accustoms the students to mathematical abstraction. It includes the standard constructions of relations, functions and orderings and leads to a discussion of the various orders of infinity. The material on logic covers not only the standard statement logic and first order predicate logic but includes an introduction to formal systems, axiomatization and model theory. The section on algebra is presented with an emphasis on lattices as well as Boolean and Heyting algebras. Background for recent research in natural language semantics includes sections on lambda abstraction and generalized quantifiers. Chapters on automata theory and formal languages contain a discussion of languages between context free and context sensitive and form the background for much current work in syntactic theory and computational linguistics. The many exercises not only reinforce basic skills but offer an entry to linguistic applications of mathematical concepts.
