Extended Abstracts Book EAGE Conference & Exhibition. Meeting, 2002      Extended Abstracts Book: Oral presentations, 2003      **Prestack Depth Migration and Velocity Model Building** Ian Frederick Jones, 2008 In *Prestack Depth Migration and Velocity Model Building* SEG Geophysics Reprint Series No 25 the editors bring together works published since the early 1980s striking a balance between algorithm development and estimation of subsurface velocity and anisotropy parameters In that time span a radical change has occurred in the way seismic processing has delivered a subsurface image The traditional purely compartmentalized approach has been superseded by a multidisciplinary collaborative workflow to build iteratively a subsurface velocity model suitable for detailed and quantitative imaging Works that have had the most practical industrial application are emphasized rather than assessing all approaches equally Hence the bias is away from R D and toward industrial practice Because of the distribution of papers in this reprint edition split between migration algorithm and velocity estimation techniques this volume will appeal to processing specialists and interpretation geoscientists alike      Geophysical Applications of Artificial Neural Networks and Fuzzy Logic W. Sandham, M. Leggett, 2013-06-29 The past fifteen years has witnessed an explosive growth in the fundamental research and applications of artificial neural networks ANNs and fuzzy logic FL The main impetus behind this growth has been the ability of such methods to offer solutions not amenable to conventional techniques particularly in application domains involving pattern recognition prediction and control Although the origins of ANNs and FL may be traced back to the 1940s and 1960s respectively the most rapid progress has only been achieved in the last fifteen years This has been due to significant theoretical advances in our understanding of ANNs and FL complemented by major technological developments in high speed computing In geophysics ANNs and FL have enjoyed significant success and are now employed routinely in the following areas amongst others 1 Exploration Seismology a Seismic data processing trace editing first break picking deconvolution and multiple suppression wavelet estimation velocity analysis noise identification reduction statics analysis dataset matching prediction attenuation b AVO analysis c Chimneys d Compression I dimensionality reduction e Shear wave analysis f Interpretation event tracking lithology prediction and well log analysis prospect appraisal hydrocarbon prediction inversion reservoir characterisation quality assessment tomography 2 Earthquake Seismology and Subterranean Nuclear Explosions 3 Mineral Exploration 4 Electromagnetic I Potential Field Exploration a Electromagnetic methods b Potential field methods c Ground penetrating radar d Remote sensing e inversion

**3D Seismic Survey Design** Gijs J. O. Vermeer, 2012 Since the first edition of 3D Seismic Survey Design appeared in 2002 seismic data acquisition has seen many changes most of which have been captured in this second edition This book by Gijs Vermeer describes in detail the properties of 3D acquisition geometries and shows how these properties naturally lead to the 3D symmetric sampling approach to 3D survey design Many examples from the literature are used to illustrate good and less good choices of acquisition parameters The link between survey parameters and noise suppression as well as imaging is an intrinsic part of the contents This book should be of great interest to the designer of 3D seismic surveys but also to every geophysicist who uses 3D seismic data to retrieve accurate information on the properties of the subsurface
