Uthoff, 2012-12-06 External fixation is now being used widely to maintain fractures osteotomies and arthrodeses in a desired position during consolidation Whereas external fixation has been readily accepted in European countries its use has weathered a rather stormy course in North America especially in the treatment of fractures Only recently has external fixation found its rightful place on this continent as well Many different models are on the market today and the practitioner is faced with a difficult decision in selecting a model Should he buy a system where the fracture has to be reduced first or should he work with a device permitting a reduction after insertion of the pins To enable surgeons to study the different systems to discuss their advantages and disadvantages and to permit them to put their hands on these devices and inspect them personally the Division of Orthopedic Surgery University of Ottawa organized an applied basic science course in May 1981 External Fixation of Fractures During this course all major systems were presented to the participants As happened during the course Internal Fixation of Fractures held two years ago the rigidity of internal fixation was frequently and intensively debated Whereas the rigidity of internal fixation cannot be altered during the course of healing the rigidity of external fixation can be changed In fact with progression of union rods of increasing elasticity can be used **External Fixation of the Pelvis and Extremities** Samir Mehta, Wudbhav N. Weber, F. Magerl, 2012-12-06 Professor B G WEBER has once again and in a very timely fashion produced a superb book on an orthopaedic subject of great importance The External Fixator is the most comprehensive text on the subject in orthopaedic literature to date Professor WEBER thoroughly discusses external fixation with clarity organization profuse illustrations and roentgenograms Professor WEBER acknowledges that the use of external fixation in orthopaedic surgery is not new and traces its history over the years He points out clearly the fact that though at various times the method has experienced periods of disrepute modern

sophistication improved technology and a better understanding of its philosophy have given the system a new and perhaps permanent place in the armamentarium of the orthopaedic surgeon. All methods of treatment have critics as well as supporters and not infrequently the strongest criticisms are the result of poor understanding of the philosophy proposed and its proper implementation. Professor WEBER in his carefully detailed and well illustrated book has made it abundantly clear that the use of external fixators in the treatment of fractures must be clearly understood by the orthopaedic surgeon in order to obtain satisfactory clinical results. His discussion of its philosophy, pathomechanics and technology are most comprehensive and leave no stone unturned and because of this the book represents a most comprehensive text on the subject.
