Emergence of Number John N. Crossley, 1987 This book presents detailed studies of the development of three kinds of number In the first part the development of the natural numbers from Stone Age times right up to the present day is examined not only from the point of view of pure history but also taking into account archaeological anthropological and linguistic evidence The dramatic change caused by the introduction of logical theories of number in the 19th century is also treated and this part ends with a non technical account of the very latest developments in the area of Gödel's theorem The second part is concerned with the development of complex numbers and tries to answer the question as to why complex numbers were not introduced before the 16th century and then by looking at the original materials shows how they were introduced as a pragmatic device which was only subsequently shown to be theoretically justifiable The third part concerns the real numbers and examines the distinction that the Greeks made between number and magnitude It then traces the gradual development of a theory of real numbers up to the precise formulations in the nineteenth century The importance of the Greek distinction between the number line and the geometric line is brought into sharp focus This is a new edition of the book which first appeared privately published in 1980 and is now out of print Substantial revisions have been made throughout the text incorporating new material which has recently come to light and correcting a few relatively minor errors The third part on real numbers has been very extensively revised and indeed the last chapter has been almost completely rewritten Many revisions are the results of comments from earlier readers of the book Haydn's Universal Index of Biography J. Bertrand Payne, 2020-04-06 Reprint of the original first published in 1870 Introduction to the History of Science George Sarton, 1927 **Encyclopedia of the History of Arabic Science** Roshdi Rashed, 2019-08-08 The Arabic

contribution is fundamental to the history of science mathematics and technology but until now no single publication has offered an up to date synthesis of knowledge in this area In three fully illustrated volumes the Encyclopedia of the History of Arabic Science documents the history and philosophy of Arabic science from the earliest times to the present day The set as a whole covers seven centuries Thirty chapters written by an international team of specialists from Europe America the Middle East and Russia cover such areas as astronomy mathematics music engineering nautical science and scientific institutions
