Eyewitness Testimony
Elizabeth F. Loftus, 1996 Every year hundreds of defendants are convicted on little more than the say so of a fellow citizen Although psychologists have suspected for decades that an eyewitness can be highly unreliable new evidence leaves no doubt that juries vastly overestimate the credibility of eyewitness accounts It is a problem that the courts have yet to solve or face squarely In Eyewitness Testimony Elizabeth Loftus makes the psychological case against the eyewitness Beginning with the basics of eyewitness fallibility such as poor viewing conditions brief exposure and stress Loftus moves to more subtle factors such as expectations biases and personal stereotypes all of which can intervene to create erroneous reports Loftus also shows that eyewitness memory is chronically inaccurate in surprising ways An ingenious series of experiments reveals that memory can be radically altered by the way an eyewitness is questioned after the fact New memories can be implanted and old ones unconsciously altered under interrogation These results have important implications for court reform police interrogation methods defense strategy and many other aspects of criminal and civil procedure Eyewitness Testimony is a powerful book that should be required reading for trial lawyers social psychologists and anyone who considers the chilling prospect of confronting an eyewitness accusation in a court of law

Thompson, Douglas J. Herrmann, J. Don Read, Darryl Bruce, David G. Payne, 2014-03-05 The organization of the first Society for Applied Research in Memory and Cognition SARMAC conference centered around two specifically identifiable research topics autobiographical memory and eyewitness memory These two areas long time staples on the menu of investigators of memory in more natural settings differ on a variety of dimensions perhaps most notably on their specific goals for scientific inquiry and application For many questions about memory and cognition that are of interest to scientific psychology there have been historical as well as rather arbitrary reasons for their assignment to the autobiographical or eyewitness memory fields Perhaps as a result of differing historical orientations the first volume's seven autobiographical memory chapters focus upon the qualities or types of recall from research participants whereas the seven chapters in the eyewitness memory volume generally focus upon the quantity a concern for completeness and accuracy of recall This interest in the ultimate end product and its application within the legal process in general encourages eyewitness memory investigators to modify their testing procedures continually in an attempt to gain even more information from participants about an event Indeed several of the eyewitness memory chapters reflect such attempts Beyond the specific contributions of each chapter to the literature on autobiographical and eyewitness memory the editors hope that the reader will come away with some general observations the autobiographical and eyewitness memory fields are thriving these two fields are likely to remain center stage in the further investigation of memory in natural contexts although the autobiographical and eyewitness memory chapters have been segregated in these two volumes the separation is often more arbitrary than real and connections between the two areas abound the two research traditions are entirely mindful of fundamental laboratory methods research and theory sometimes drawing their research inspirations from that quarter and the two fields though driven largely by everyday
