changing visual discourses techniques and technologies affected the novels of that period In readings that bring philosophies of vision into dialogue with photography and film as well as the methods of observation used by the social sciences Karen Jacobs identifies distinctly modernist kinds of observers and visual relationships This important reconception of modernism draws upon American British and French literary and extra literary materials from the period 1900 1955 These texts share a sense of crisis about vision s capacity for violence and its inability to deliver reliable knowledge Jacobs looks closely at the ways in which historical understandings of race and gender inflected visual relations in the modernist novel She shows how modernist writers increasingly aware of the body behind the neutral lens of the observer used diverse strategies to displace embodiment onto those others historically perceived as cultural bodies in order to reimagine for themselves or their characters a purified gaze *The Eye s Mind* addresses works by such high modernists as Vladimir Nabokov Virginia Woolf and more distantly Ralph Ellison and Maurice Blanchot as well as those by Henry James Zora Neale Hurston and Nathanael West which have been tentatively placed in the modernist canon although they forgo the full blown experimental techniques often seen as synonymous with literary modernism Jacobs reframes fundamental debates about modernist aesthetic practices by demonstrating how much those practices are indebted to the changing visual cultures of the twentieth century **Visual**

*Drosophila melanogaster* fruit fly is a highly versatile model with a genetic legacy of more than a century It provides powerful genetic cellular biochemical and molecular biology tools to address many questions extending from basic biology to human diseases

One of the most important questions in biology is how a multi cellular organism develops from a single celled embryo The discovery of the genes responsible for pattern formation has helped refine this question and has led to other questions such as the role of various genetic and cell biological pathways in regulating the process of pattern formation and growth during organogenesis The *Drosophila* eye model has been extensively used to study molecular genetic mechanisms involved in

patterning and growth Since the genetic machinery involved in the *Drosophila* eye is similar to humans it has been used to model human diseases and homology to eyes in other taxa This updated second edition covers current progress in the study of molecular genetic mechanisms of pattern formation mutations in axial patterning genetic regulation of growth and more using the *Drosophila* eye as a model
