Expressive Therapy With Troubled Children:

Expressive Therapy with Troubled Children P. Gussie Klorer, 2000 Expressive therapy promotes children's capacity to heal from early trauma by helping them process painful experiences over time at progressively more mature levels of understanding. Relying on excellent coping skills that have helped them survive, children in therapy are often invested in not talking due to the highly defended nature of their problems or perhaps the need to protect a parent through silence. Alternative means of expression are often necessary. Dr. Klorer's work allows children to communicate intense feelings in ways that are natural to them through art and play, not solely by verbalization. In treatment, children are helped to develop their own means of creative expression through idiosyncratic symbols, stories, and repetitive themes that both express and contain their pain. In addition to a means of communication, art can be used in therapy to assess levels of emotional and cognitive functioning, object relations, developmental tasks, strengths, and defense mechanisms. Expressive therapy, which integrates object relations theory, attachment theory, and cognitive development, can be applied to family assessment and treatment as well. Professionals who work with children will welcome this book as it offers sensitive and creative ways to help even their most challenging patients. *Expressive Therapy with Traumatized Children* P. Gussie Klorer, 2017-02-01

Expressive Therapy with Traumatized Children offers students in training and professionals who work with children an array of sensitive and creative ways to help even their most challenging patients. The second edition builds upon cutting edge research in the neuroscience of trauma and art therapy to examine children's development alongside their understanding of trauma. Including many new and revised case studies, Klorer illustrates effective treatment strategies to offer patients alternative means of expression. Klorer's rich and highly accessible teaching voice seamlessly weaves together art therapy theory, research, and cases into an invaluable resource for students and practitioners alike. **Expressive Arts Therapy for Traumatized Children and Adolescents** Carmen Richardson, 2015-08-11

Neurobiologically Informed Trauma Therapy with Children and Adol Linda Chapman, 2014-01-20. Nonverbal interactions are applied to trauma treatment for more effective results. The model of treatment developed here is grounded in the physical, psychological, and cognitive reactions children have to traumatic experiences and the consequences of those experiences. The approach to treatment utilizes the integrative capacity of the brain to create a self-foster insight and produce change. Treatment strategies are based on cutting-edge understanding of neurobiology, the development of the brain, and the storage and retrieval of traumatic memory. Case vignettes illustrate specific examples of the reactions of children, families, and teens to acute and repeated exposure to traumatic events. Also presented is the most recent knowledge of the role of the right hemisphere (RH) in development and therapy. Right-brain communication and how to recognize the non-verbal, symbolic, and unconscious affective processes will be explained along with examples of how the therapist can utilize art-making, media tools, and self to engage in a two-person biology.

Expressive and Creative Arts Methods for Trauma Survivors Lois Carey, 2006-03-30.
