Extended Outlooks:

Extended Outlooks Jane Cooper, 1981 Collects short stories poetry and critical essays by women such as Adrienne Rich Marge Piercy Margaret Atwood and Tillie Olsen The Long-term Budget Outlook, 2013 *The 2013 Long-term Budget Outlook* United States. Congressional Budget Office, 2013 **The 2012 Long-term Budget Outlook**, 2012 In the past few years the federal government has been recording the largest budget deficits since 1945 both in dollar terms and as a share of the economy Consequently the amount of federal debt held by the public has surged At the end of 2008 that debt equaled 40 percent of the nation's annual economic output gross domestic product or GDP a little above the 40 year average of 38 percent Since then the figure has shot upward By the end of this year the Congressional Budget Office CBO projects federal debt will exceed 70 percent of GDP the highest percentage since shortly after World War II The sharp rise in debt stems partly from lower tax revenues and higher federal spending caused by the severe economic downturn and from policies enacted during the past few years However the growing debt also reflects an imbalance between spending and revenues that predated the recession Whether that debt will continue to grow in coming decades will be affected not only by long term demographic and economic trends but also by policymakers decisions about taxes and spending The aging of the baby boom generation portends a significant and sustained increase in the share of the population receiving benefits from Social Security and Medicare as well as long term care services financed by Medicaid Moreover per capita spending for health care is likely to continue rising faster than spending per person on other goods and services for many years although the magnitude of that gap is uncertain Without significant changes in government policy those factors will boost federal outlays relative to GDP well above their average of the past several decades a conclusion that holds under any plausible assumptions about future trends in demographics economic conditions and health care costs According to CBO's projections if current laws remained in place spending on the major federal health care programs alone would grow from more than 5 percent of GDP today to almost 10 percent in 2037 and would continue to increase thereafter 1 Spending on Social Security is projected to rise much less sharply from 5 percent of GDP today to more than 6 percent in 2030 and subsequent decades Altogether the aging of the population and the rising cost of health care would cause spending on the major health care programs and Social Security to grow from more than 10 percent of GDP today to almost 16 percent of GDP 25 years from now That combined increase of more than 5 percentage points for such spending as a share of the economy is the federal government's programs and activities equivalent to about 850 billion today By comparison spending on all of excluding net outlays for interest has averaged about 18.5 percent of GDP over the past 40 years If lawmakers continued certain policies that have been in place for a number of years or modified some provisions of current law that might be difficult to sustain for a long period the increase in spending on health care programs and Social Security would be even larger Absent substantial increases in federal revenues such growth in outlays would result in greater debt burdens than the United States has ever

CBO's 2011 Long-term Budget Outlook Joyce Manchester,2011 Presents projections of federal spending and revenues over the coming decades Under current law an aging population and rapidly rising health care costs will sharply increase federal spending for health care programs and Social Security If revenues remained at their historical average share of gross domestic product GDP such spending growth would cause federal debt to grow to unsustainable levels If policymakers are to put the federal government on a sustainable budgetary path they will need to increase revenues substantially as a percentage of GDP decrease spending significantly from projected levels or adopt some combination of those two approaches Charts and tables This is a print on demand report ESSA News United States. Government Accountability Office,2007 Nation's Long-Term Fiscal Outlook Ralph Dawn,2009-09 The gov t publishes long term fiscal simulations of what might happen to fed deficits and debt levels under varying policy assumptions There are two simulations 1 Baseline Extended follows the Sept baseline estimates for the first 10 years and then holds revenue and spending other than large entitlement programs constant as a share of GDP and 2 The Alternative simulation is based on historical trends and recent policy preferences Discretionary spending grows with GDP rather than inflation during the first 10 years Medicare physician pay rates are not reduced and all expiring tax provisions are extended until 2019 and then revenue is brought back to about its historical level This update incorp March 2009 baseline projections Illus **Long-Term Budget Outlook** Joyce Manchester,2010-11 Examines the pressures on the federal budget by presenting projections of federal spending and revenues over the coming decades An aging population and rapidly rising health care costs will sharply increase federal spending for health care programs and Social Security Such spending will cause federal debt to grow to unsustainable levels Policymakers will need to let revenues increase substantially decrease spending significantly or adopt some combination of those two approaches Contents of this report Long term Outlook for the Federal Budget Long term Outlook for Mandatory Spending on Health Care Long term Outlook for Social Security Long term Outlook for Revenues Long term Projections through 2080 Charts and tables

Irving,2008-11 Long term fiscal simulations of what might happen to fed deficits and debt levels under varying policy assumptions continue to illustrate that the long term fiscal outlook is unsustainable Despite some improvement in the long term outlook for fed health and retirement spending the fed gov t still faces large and growing structural deficits driven primarily by rising health care costs and known demographic trends Nearly 80 million Americans will become eligible for Social Security retirement benefits over the next two decades Yet the real drive of the long term fiscal outlook is health care spending Medicare and Medicaid are both large and projected to continue growing rapidly in the future Charts and tables **Droughts** Donald A.
