Handbook of Political Leadership Billie Bender, 2019-08-09 Leadership is an increasingly relevant area of research especially for social scientists Leadership in rural areas of developing societies has acquired more importance in the era of globalization Political leadership is a concept central to understanding political processes and outcomes yet its definition is elusive Many disciplines have contributed to the study of leadership including political theory history psychology and management studies Political leadership has made a comeback It was studied intensively not only by political scientists but also by political sociologists and psychologists Sovietologists political anthropologists and by scholars in comparative and development studies from the 1940s to the 1970s Thereafter the field lost its way with the rise of structuralism neo institutionalism and rational choice approaches to the study of politics government and governance Understanding and measuring political leadership is a complex business Though we all have ideals of what makes a good leader they are often complex contradictory and more

than a little partisan The world is full of aspiring political leaders but sadly very few live up to the leadership ideals In fact many political leaders seem to severely lack some of the most important leadership qualities such as integrity and accountability It is no coincidence that for many people the word politician has such negative connotations However history and present day shows us that there are still a few who come close to the leadership ideals and who are good examples of an effective political leader In this book quality of leadership which played a dynamic role in the political has been analysed
