Fortuna,Gianguido Rizzotto,Mario Lavorgna,Giuseppe Nunnari,Maria Gabriella Xibilia,Riccardo Caponetto,2012-12-06 In the last decade new artificial intelligence methods for the modelling and control of complex systems namely neural networks fuzzy logic and probabilistic reasoning have drawn the interest of researchers and engineers Recently the advantages achievable by using combinations of these methods which have independent origin and evolution have been pointed out generating a new paradigm which is now termed soft computing This new methodology subsumes the capabilities of neural networks for modelling non linear systems and for solving classification problems the power of fuzzy logic to represent approximate or heuristic reasoning and the large capabilities of evolutionary computation for problem optimisation The book presents a clear understanding of a new type of computation system the cellular neural network CNN which has been successfully applied to the solution of many heavy computation problems mainly in the fields of image processing and complex partial differential equations CNNs computation based systems represent new opportunities for improving the soft

computation toolbox The application of soft computing to complex systems and in particular to chaotic systems with the generation of chaotic dynamics by using CNN is also described These aspects are of particular interest owing to their growing interest for research and application purposes Specific topics covered in the text include fuzzy logic control and neural networks artificial neural networks and their application in the modelling and control of dynamical systems evolutionary optimisation algorithms complex dynamics and cellular neural networks applications in urban traffic noise monitoring robot control and rapid thermal process systems

Becoming Noise Music tells the story of noise music in its first 50 years using a focus on the music's sound and aesthetics to do so. Part One focuses on the emergence and stabilization of noise music across the 1980s and 1990s whilst Part Two explores noise in the twenty-first century. Each chapter contextualizes, tells the story of the music under discussion, before describing and interpreting its sound and aesthetic. Stephen Graham uses the idea of becoming to capture the unresolved dialectical tension between noise disorder and musical order in the music itself, the experiences listeners often have in response, and the overarching story or becoming of the genre that has taken place in this first fifty or so years. The book therefore doubles up on becoming: it is about both the becoming it identifies in and the larger genre-making process of the becoming of noise music. On the latter count, it is the first scholarly book to focus in such depth and breadth on the sound and story of noise music as opposed to contextual questions of politics, history, or sociology. Relevant to both musicology and noise audiences, *Becoming Noise Music* investigates a vital but analytically underexplored area of avant-garde musical practice.

Manufacturing Control of Textile Materials Valerii Zdorenko, Nataliia Zashchepkina, Sergiy Barylko, Artur Zaporozhets, Serhii Lisovets, Ihor Kiva, 2023-02-17. This book examines issues of improving the efficiency of the control technological parameters of textile materials through computerized systems with the application of non-contact methods, as only they allow to react quickly to changes of technological parameters during production. The original models, algorithms, software, and hardware of the developed system for the control technological parameters of textile materials are presented. Also, the book presents new methods for measuring the technological parameters of textile materials which do not need taking into account the constant readjustment of the system to controlled samples of materials with different structure and porosity. The developed model of the computerized system allows contactless control of basis weight and porosity of fabrics in the course of their production. This book contains six chapters for researchers, engineers, as well as lecturers and postgraduates of higher education institutions dealing with ultrasonic control engineering equipment.
