The first comprehensive book to focus on ultra high temperature ceramic materials in more than 20 years Ultra High Temperature Ceramics are a family of compounds that display an unusual combination of properties including extremely high melting temperatures 3000 C high hardness and good chemical stability and strength at high temperatures Typical UHTC materials are the carbides nitrides and borides of transition metals but the Group IV compounds Ti Zr Hf plus TaC are generally considered to be the main focus of research due to the superior melting temperatures and stable high melting temperature oxide that forms in situ Rather than focusing on the latest scientific results Ultra High Temperature Ceramics Materials for Extreme Environment Applications broadly and critically combines the historical aspects and the state of the art on the processing densification properties and performance of boride and carbide ceramics In reviewing the historic studies and recent progress in the field Ultra High Temperature Ceramics Materials for Extreme Environment Applications provides Original reviews of research conducted in the 1960s and 70s Content on electronic structure synthesis powder processing densification property measurement and characterization of boride and carbide ceramics Emphasis on materials for hypersonic aerospace applications such as wing leading edges and propulsion components for vehicles traveling faster than Mach 5 Information on materials used in the extreme environments associated with high speed cutting tools and nuclear power generation Contributions are based on presentations by leading research groups at the conference Ultra High Temperature Ceramics Materials for Extreme Environment Applications II held May 13 19 2012 in Hernstein Austria Bringing together disparate researchers from academia government and industry in a singular forum the meeting cultivated didactic discussions and efforts between bench researchers designers and engineers in assaying results in a broader context and moving the technology forward toward near and long term use This book is useful for furnace manufacturers aerospace manufacturers that may be pursuing hypersonic technology researchers studying any aspect of boride and carbide ceramics and practitioners of high temperature structural ceramics

Extreme Environment Electronics John D. Cressler, H. Alan Mantooth, 2017-12-19 Unfriendly to conventional electronic devices circuits and systems extreme environments represent a serious challenge to designers and mission architects The first truly comprehensive guide to this specialized field Extreme Environment Electronics explains the essential aspects of designing and using devices circuits and electronic systems intended to operate in extreme environments including across wide temperature ranges and in radiation intense scenarios such as space The Definitive Guide to Extreme Environment Electronics Featuring contributions by some of the world's foremost experts in extreme environment electronics the book provides in depth information on a wide array of topics It begins by describing the extreme conditions and then delves into a description of suitable semiconductor technologies and the modeling of devices within those technologies It also discusses reliability issues and failure mechanisms that readers

needed to be aware of as well as best practices for the design of these electronics Continuing beyond just the paper design of building blocks the book rounds out coverage of the design realization process with verification techniques and chapters on electronic packaging for extreme environments The final set of chapters describes actual chip level designs for applications in energy and space exploration Requiring only a basic background in electronics the book combines theoretical and practical aspects in each self contained chapter Appendices supply additional background material With its broad coverage and depth and the expertise of the contributing authors this is an invaluable reference for engineers scientists and technical managers as well as researchers and graduate students A hands on resource it explores what is required to successfully operate electronics in the most demanding conditions
