

Геодинамика и магматизм Загрос-Кавказского сегмента в фанерозое

Приведены данные и обобщены различные тектонические факторы, объясняющие наличие в платформе геодинамическую полноту в эволюции Земли, вступлении Загрос-Кавказского сегмента в континентальную субдукцию в связи с включением ее в складчатый бассейн Месопотамия, разбитием массивов вулканог-плутонических пород и несубдукционной прокладкой палеогенового магматизма, который по распространности и спектру рудных элементов значительно превосходит островной магматизм архейства. Доказано, что на трех континентальных этапах развития сегмента давление и температура расплавления литосферы по плоскости срыва в зоне глубокого разлома не являются субдукционными процессами. Рассмотрены также прикладное значение геодинамической истории в формировании геологических рудно-магматических и нефтегазовых систем. Предлагается глубинно-фронтальное прохождение углеводородов, вследствие структурно-геодинамической полноты распространения магматического поля со зрелой континентальной корой в центральном поле и осадочные бассейны бассейнов с разорванной корой на фронтальной окраине складчатого пояса Загрос-Кавказского сегмента. Для построения широтного профиля, структуры и протяженности вулкан.
