Proceedings of The 2nd International Conference on Climate Change and Ocean Renewable Energy Soufiane Haddout, K.L. Priya, Antonio Mubango Hogueane, 2024-10-03 Renewable energy is energy that is collected from renewable resources that are naturally replenished on a human timescale It includes sources such as sunlight tides waves wind rain and geothermal heat According to BP's 2018

Energy Outlook EO renewable energy will be the fastest growing source of energy increasing fivefold by 2040 thus providing around 14% of global primary energy at this future point in time On the other hand climate change is bringing about rising temperatures which has significant negative impacts on humans and the environment and transitioning to renewable energy sources such as biofuels can help meet this challenge Transitioning to renewable energy and reducing reliance on fossil fuels is one way to help slow down the effects of climate change While renewables used to be a more expensive option new clean energy technologies are lowering costs and helping to move economies away from fossil fuels *Ocean* ,2008-07-21
